

Where did we see the most growth out of the fastest-growing, privately owned American businesses in 2014?

Presented by David Perez

ABOUT THE INC. 5000

- Inc. Magazine is an American publication that focuses on privately-owned American businesses.
- Every year they list the top 5,000 fastest-growing, privately-owned American businesses.
- They rank these companies according to who has the highest growth percentage, from 1-5,000.
- The growth percentage is calculated based on the revenue growth percentage rate accumulated by each company over the course of a three-year time span.
 - The equation:
 - $$\frac{\text{Recent Year Revenue} - \text{Base Year Revenue}}{\text{Base Year Revenue}} \times 100$$
- Revenue is defined as the amount of revenue accumulated by the company in the year 2013.

GOAL, DATASET, AND CLEANING

- **Goal:** To find some interesting insights about the fastest-growing, privately-held businesses in the country according to the Inc.5000, 2014 list.
- **Dataset:**
<https://public.tableau.com/app/resources/sample-data>.
 - This dataset is reflective of the data produced by the American publication, Inc. Magazine, and their annual list of the top 5,000 fastest-growing, privately-owned businesses in America.
 - It provides the name, location, rank, growth, revenue, workers, industry, and the total amount of years each company has been on the list.
 - This dataset ONLY provides data for the Inc. 5000, 2014 list.
- **Cleaning (Excel):**
 - Removed redundant data.
 - Formatted for easier comprehension.

EXCEL BREAKDOWN

- Deleted the “input” column as there was no data in that column.
- The “_num” column, the “_resultNum” column, and the “rank” column had the exact same information. I didn’t think it was necessary to have 3 rows with the exact same information, so I deleted the “_resultNum” and “_num” columns.
- The “_widgetName,” “_source”, and “_pageURL” columns didn’t have valuable data, not to mention it had the same exact value for all 5000 rows, so these columns were also deleted.
- The “company” and “url” columns had the same exact information, so I deleted the “url” column.
- The “state_l” column displayed the entire name of the state, while the “state_s” column displayed the state abbreviation, respectively. I didn’t think it was necessary to have both columns, so I deleted the “state_l” column and renamed the “state_s” column to “state.”
- The “city” and “metro” columns were pretty similar, and I found it a little redundant and unnecessary, so I deleted the “metro” column. I felt like the “city” column was a more detailed descriptive that the overall encompassing “metro” column.
- The “growth” column did not specify that the numbers in that column were percentage based. When converting the column into a percent, the numbers were still hard to read, so I tried to add a coma to the formatting, which took away the percent sign, and wasn’t a significant indication of the columns meaning. As a way to get around these issues, I formatted the numbers with a comma to make the numbers easier to read and renamed the column “growth in %” to indicate what exactly those numbers mean.
- I formatted the “revenue” column as a currency.
- I formatted the “workers” column with a comma and decreased the decimal places by 2 as there are no decimal places when counting an individual.
- I used the MAX, MIN, MEDIAN, and AVERAGE functions to look for any outliers for the “workers,” “growth in %”, “revenue,” and “years on list” columns. There were definitely some outliers, but after further investigation and reasoning, I came to the conclusion that given the context of the dataset, these outliers seem to be justified.
- I used COUNTBLANK and COUNTA to make sure all 5,000 rows had values for each column.

TABLEAU BREAKDOWN

- Although I am looking for growth in terms of growth by percentage, I am also looking for growth by revenue and workers as well. I am looking for who were the “top of their class,” so to speak, for each respective category and subcategory. I dedicated 4 graphs/maps/subcategories to each of these three main categories to attain different insights for each:
 - Growth/revenue/workers by company.
 - Growth/revenue/workers by industry.
 - Growth/revenue/workers by state.
 - Growth/revenue/workers by city.
- I also felt it was important to see if there was any correlation between these categories so I created the following scatterplots based on industry:
 - Revenue and Workers.
 - Growth and Workers.
 - Revenue and Growth.
 - NOTE: I wanted to point out that I did try this based on “company” instead of “industry” at first, but I couldn’t see too much of a correlation because I felt like there were too many dots/companies to get an accurate visual assessment. Once I changed it to “industry” I did see a low positive correlation in 2 out of the 3 graphs, so I felt like this was a more visually accurate assessment.
- The last sheet is a text table named “Breakdown by Industry” which organizes all of the companies according to their respective industry and gives the subtotals of each industry based on revenue and workers. I felt like this was an important table to have because you can pull detailed insights based on industry. You can also do things like compare and contrast competitors within the same industry or even compare and contrast industries as a whole.
- I created three dashboards to summarize growth, revenue, and workers. Each dashboard has a map, company graph, and industry graph. Click on any one of these graphs and you will get a detailed breakdown of the other two graphs.
- The last dashboard gives you a breakdown of growth, revenue, and workers by city.
 - NOTE: I didn’t want to use a map of the cities for this because there were too many cities close together and it would’ve been hard to click on the right one all of the time. I created a custom legend to make it easier to click on a city to access data.
- NOTE: When I cleaned up the dataset in Excel, I noticed that there were two columns that represented city: “metro” and “city.” The metro column was this all-encompassing metropolitan area, that included suburbs of the city, and I felt like that was an unfair advantage when analyzing the dataset by city. I decided to keep the city column instead because I wanted a detailed insight as to what city was performing the best on their own and not because they were grandfathered into this mass metropolitan area that could be advantageous to some, while disadvantageous to others. I felt like this was a more level playing field and it did indeed give a couple of interesting insights.

TABLEAU “GROWTH BY INDUSTRY” HORIZONTAL BAR CHART

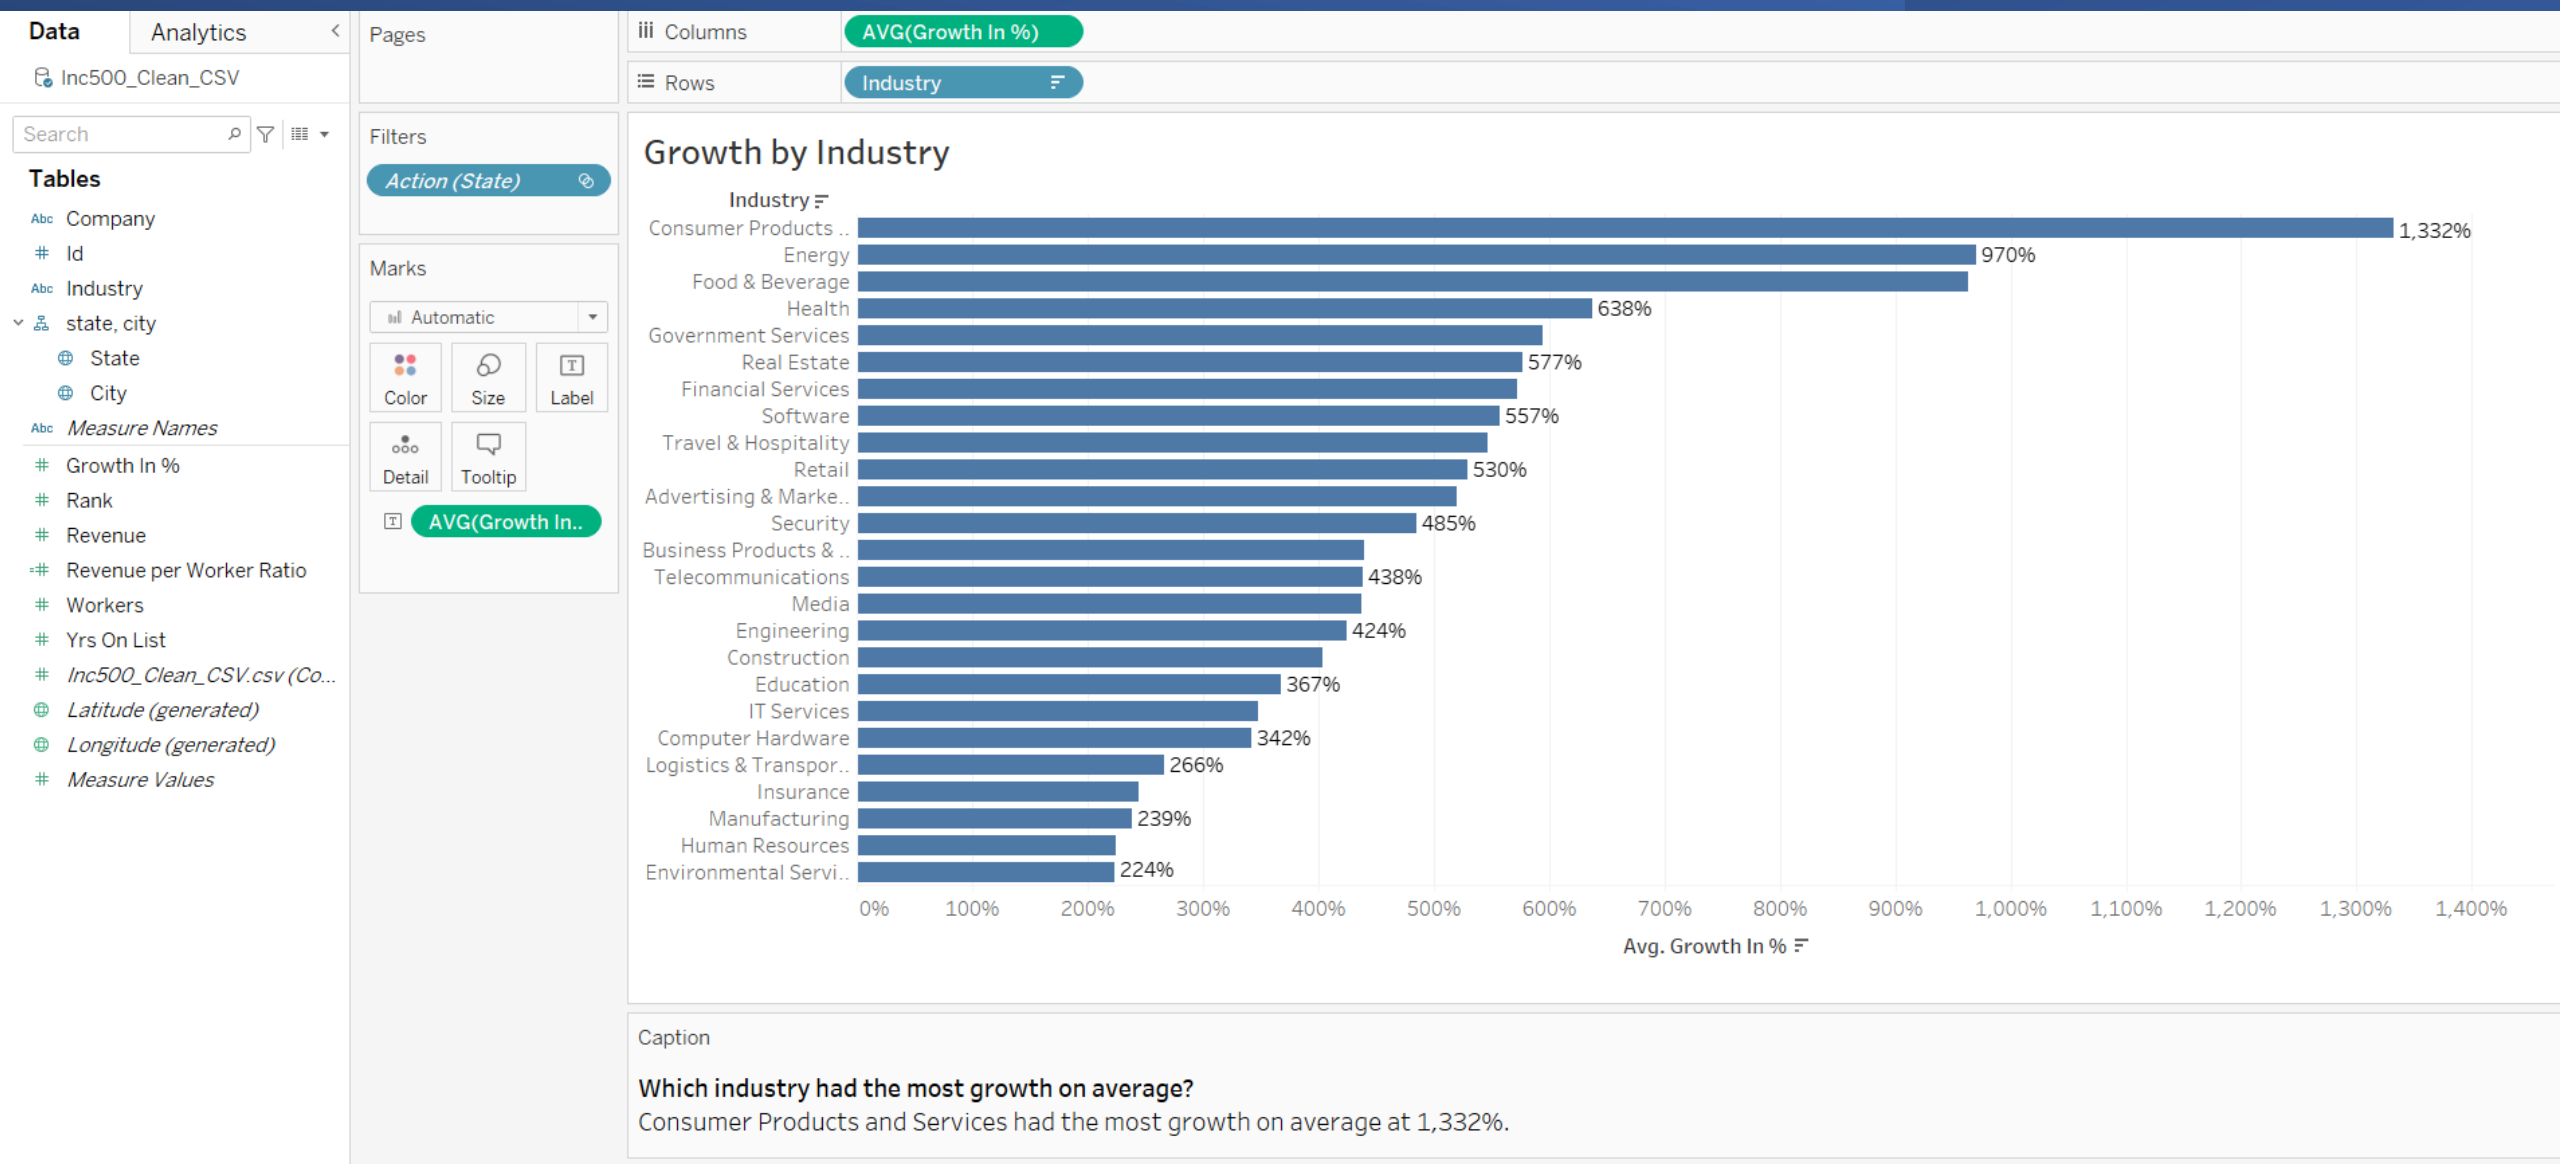

TABLEAU “GROWTH BY STATE” FILLED MAP

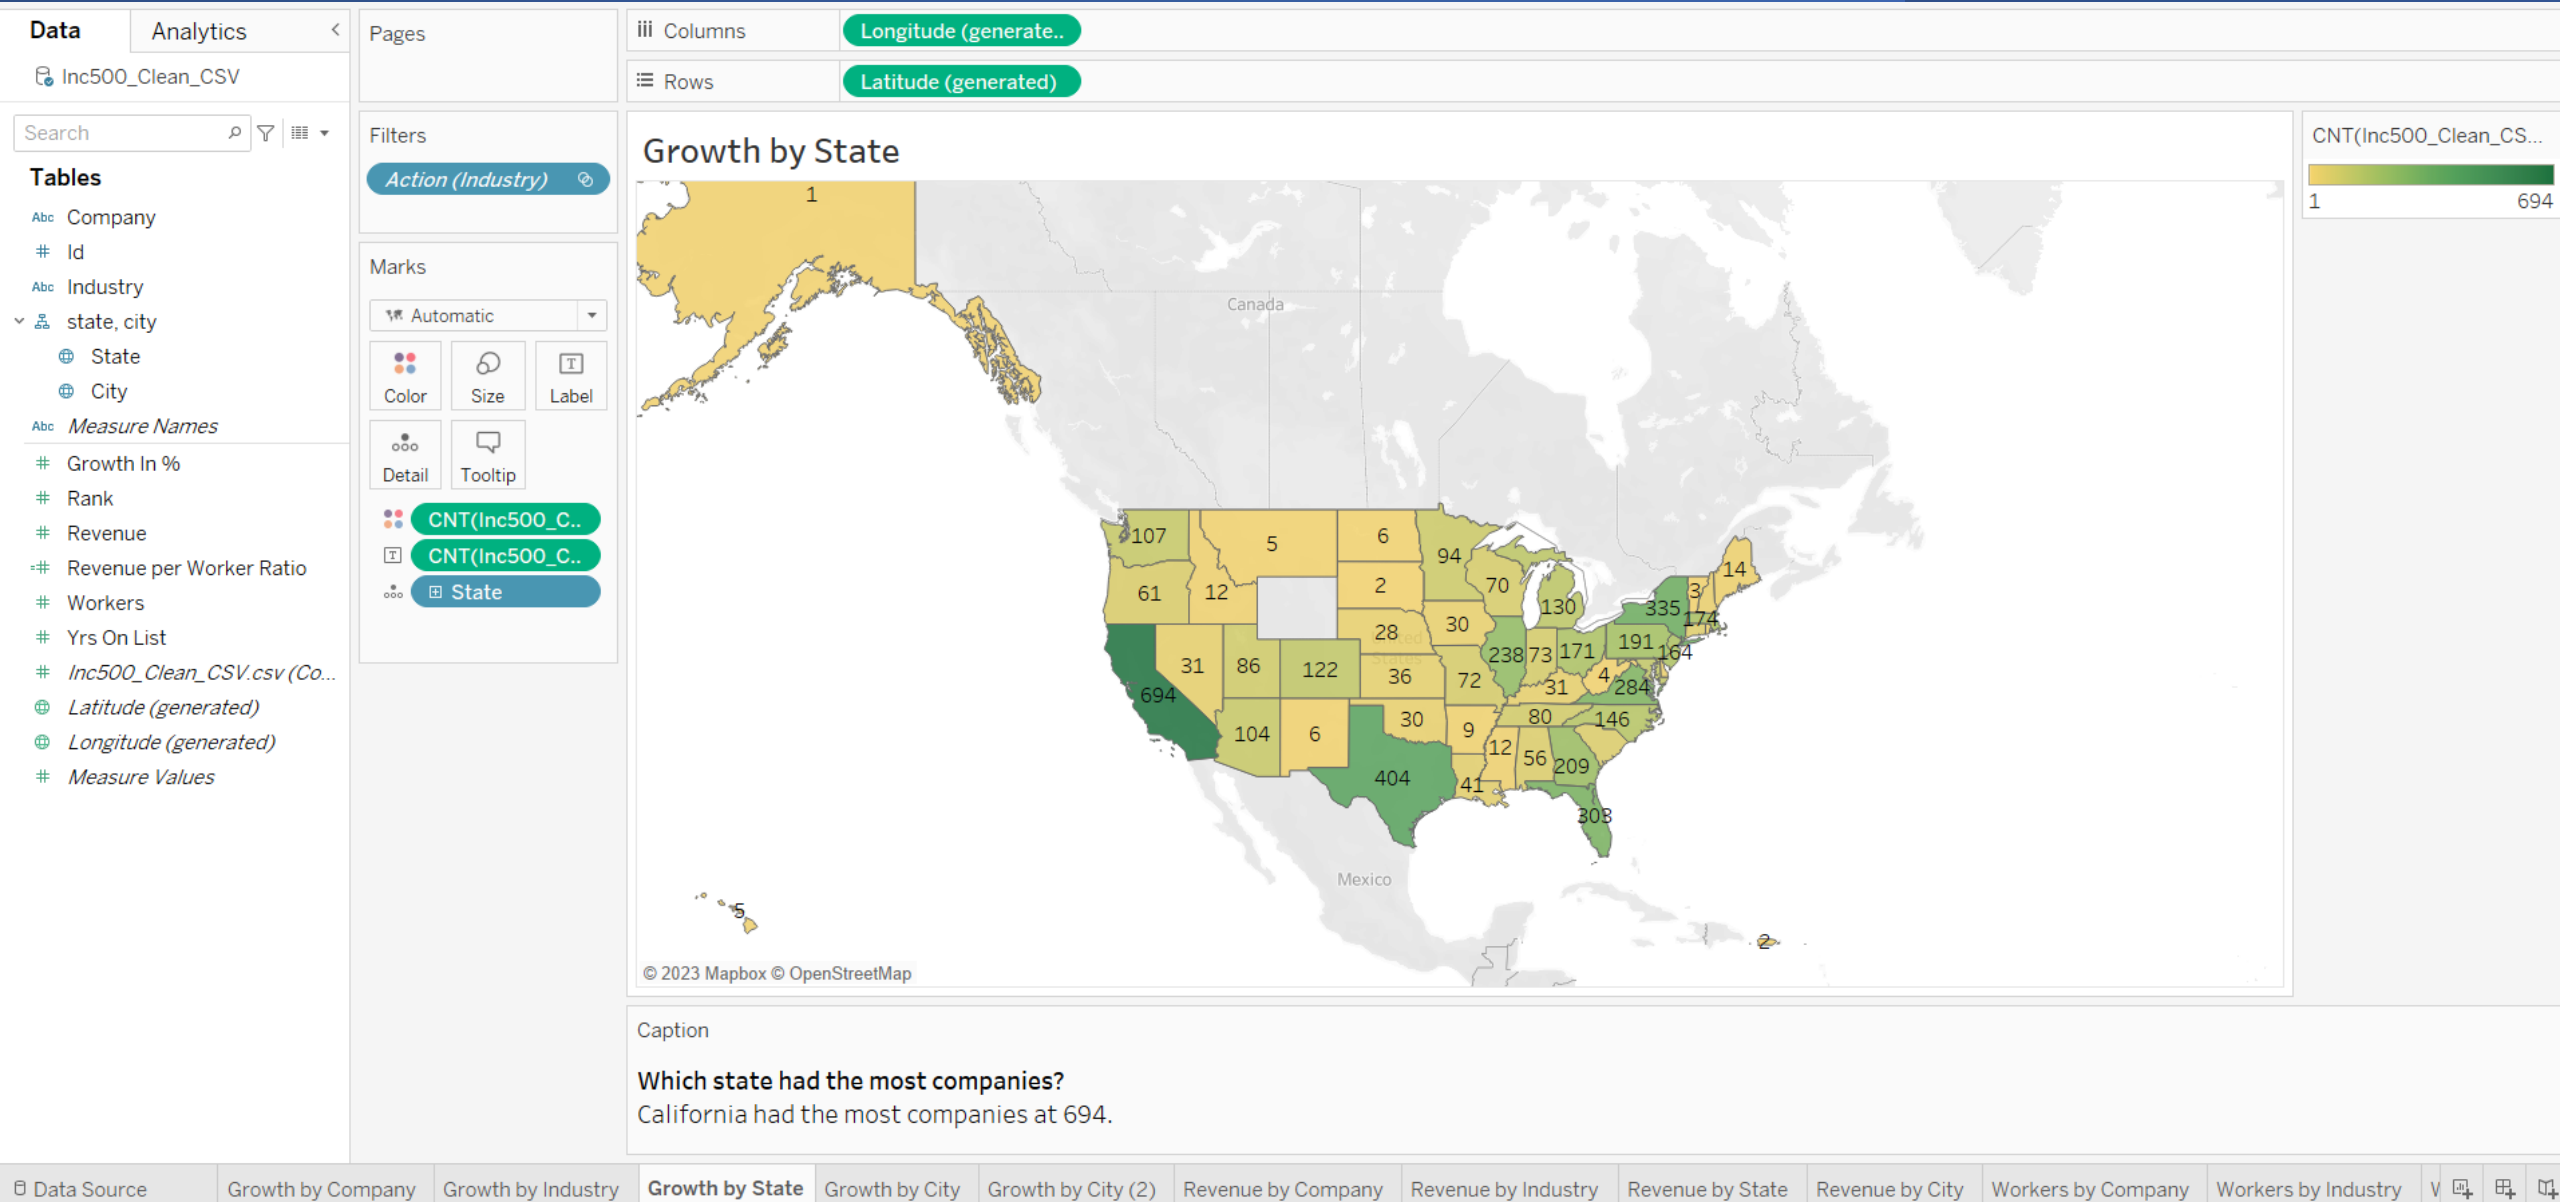

TABLEAU “GROWTH BY CITY” SYMBOL MAP

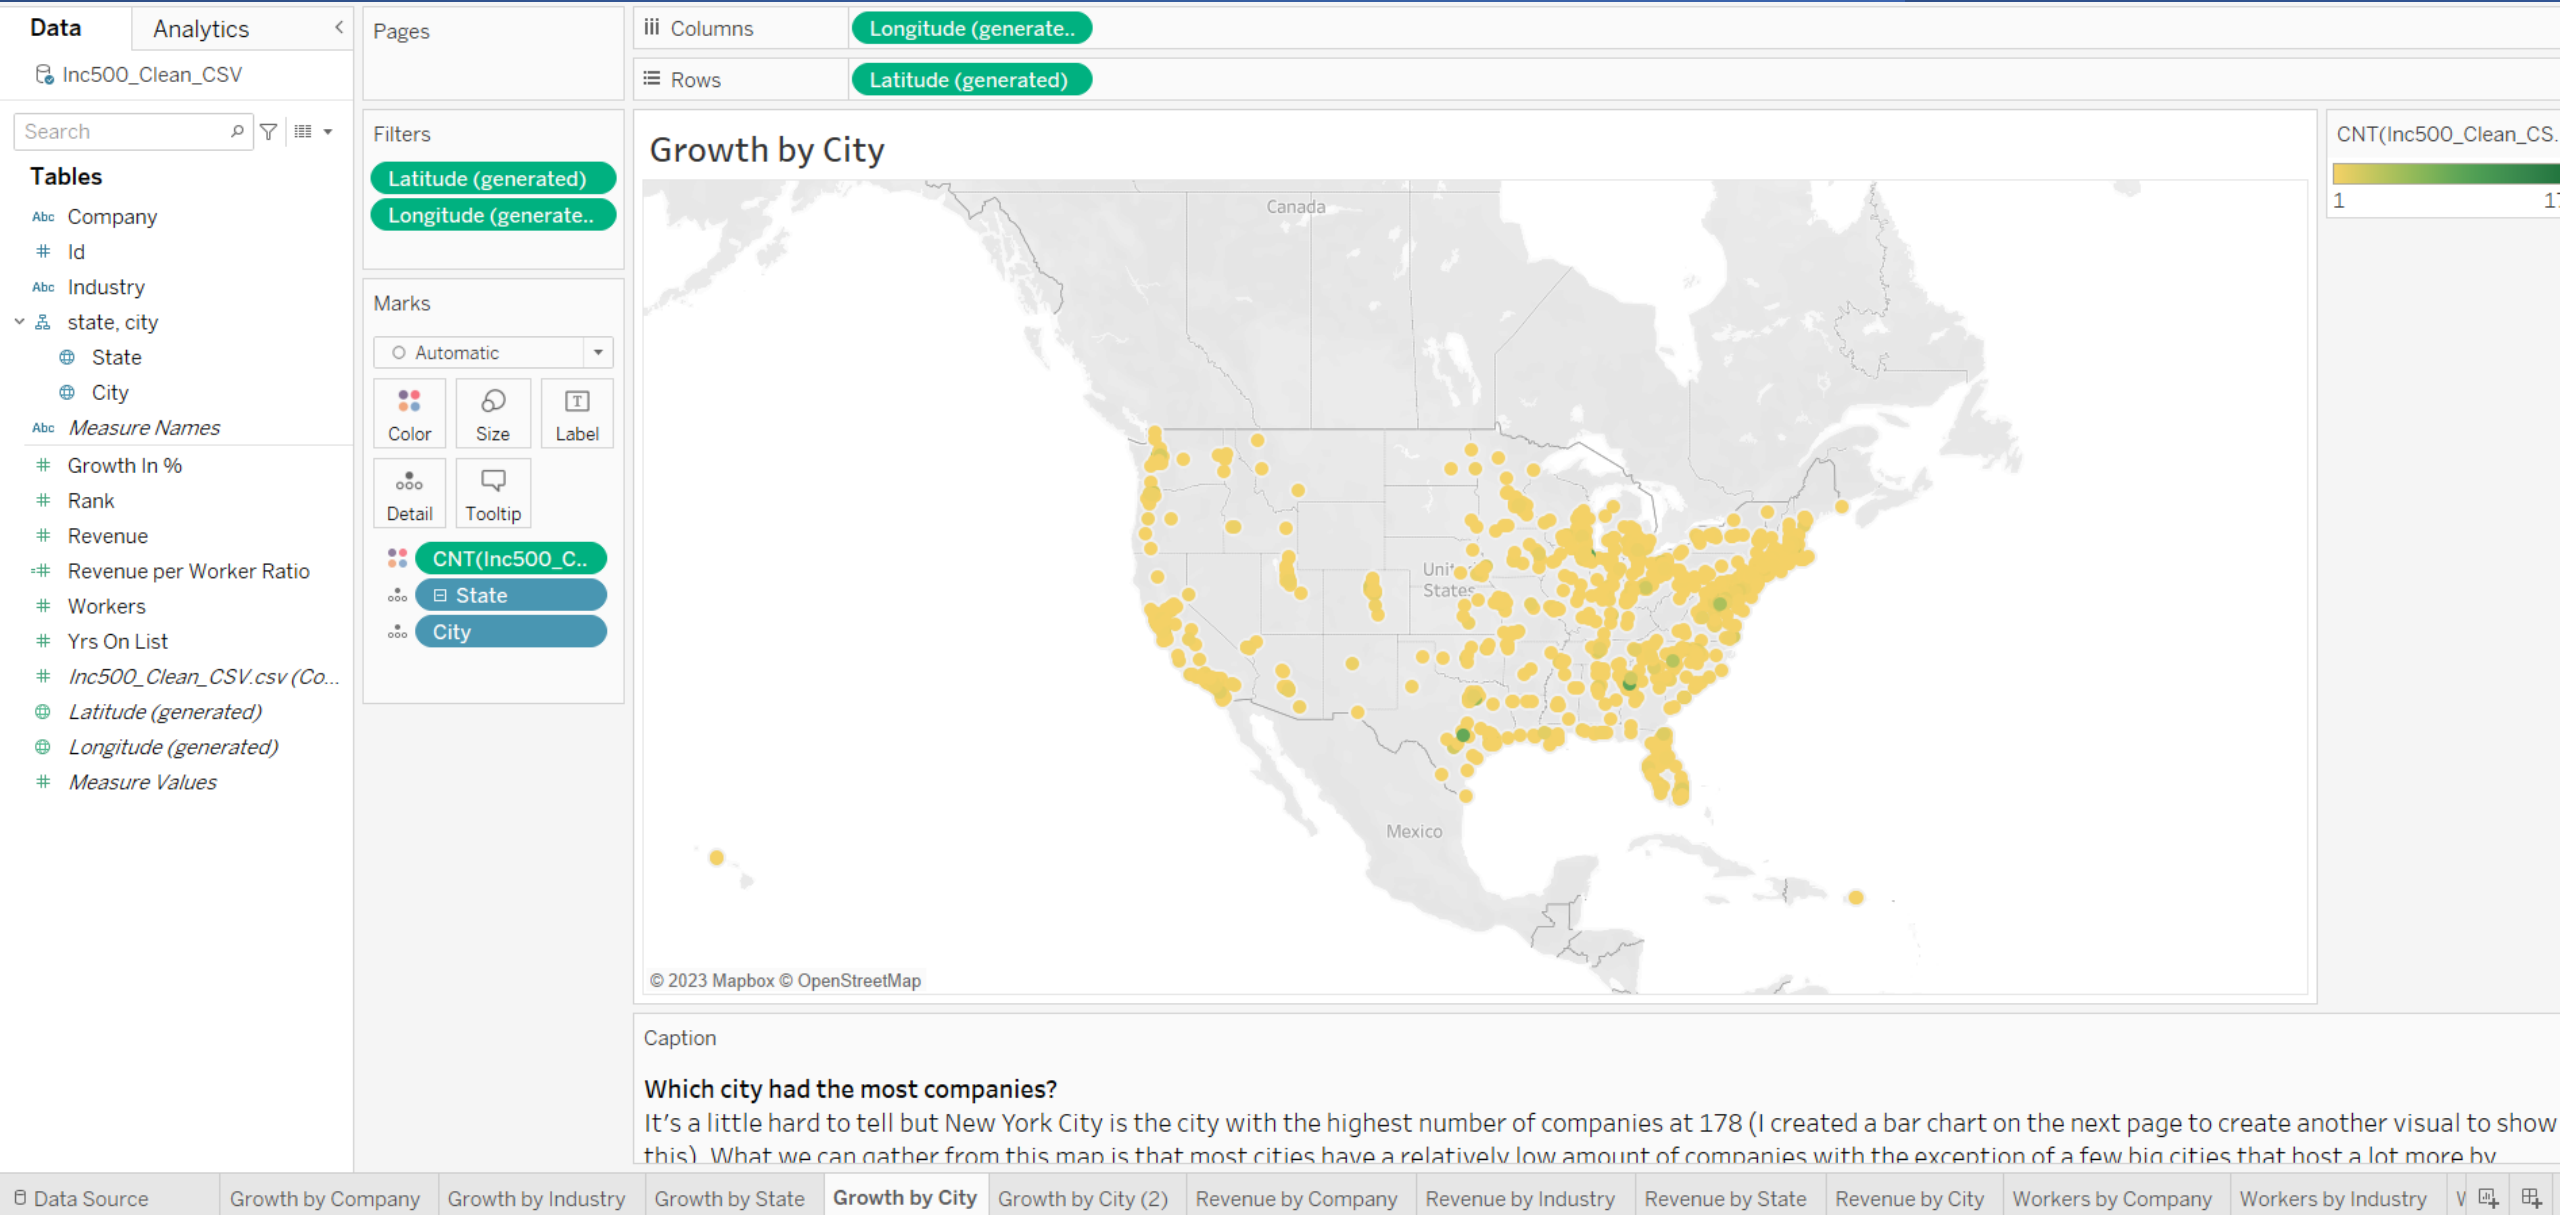

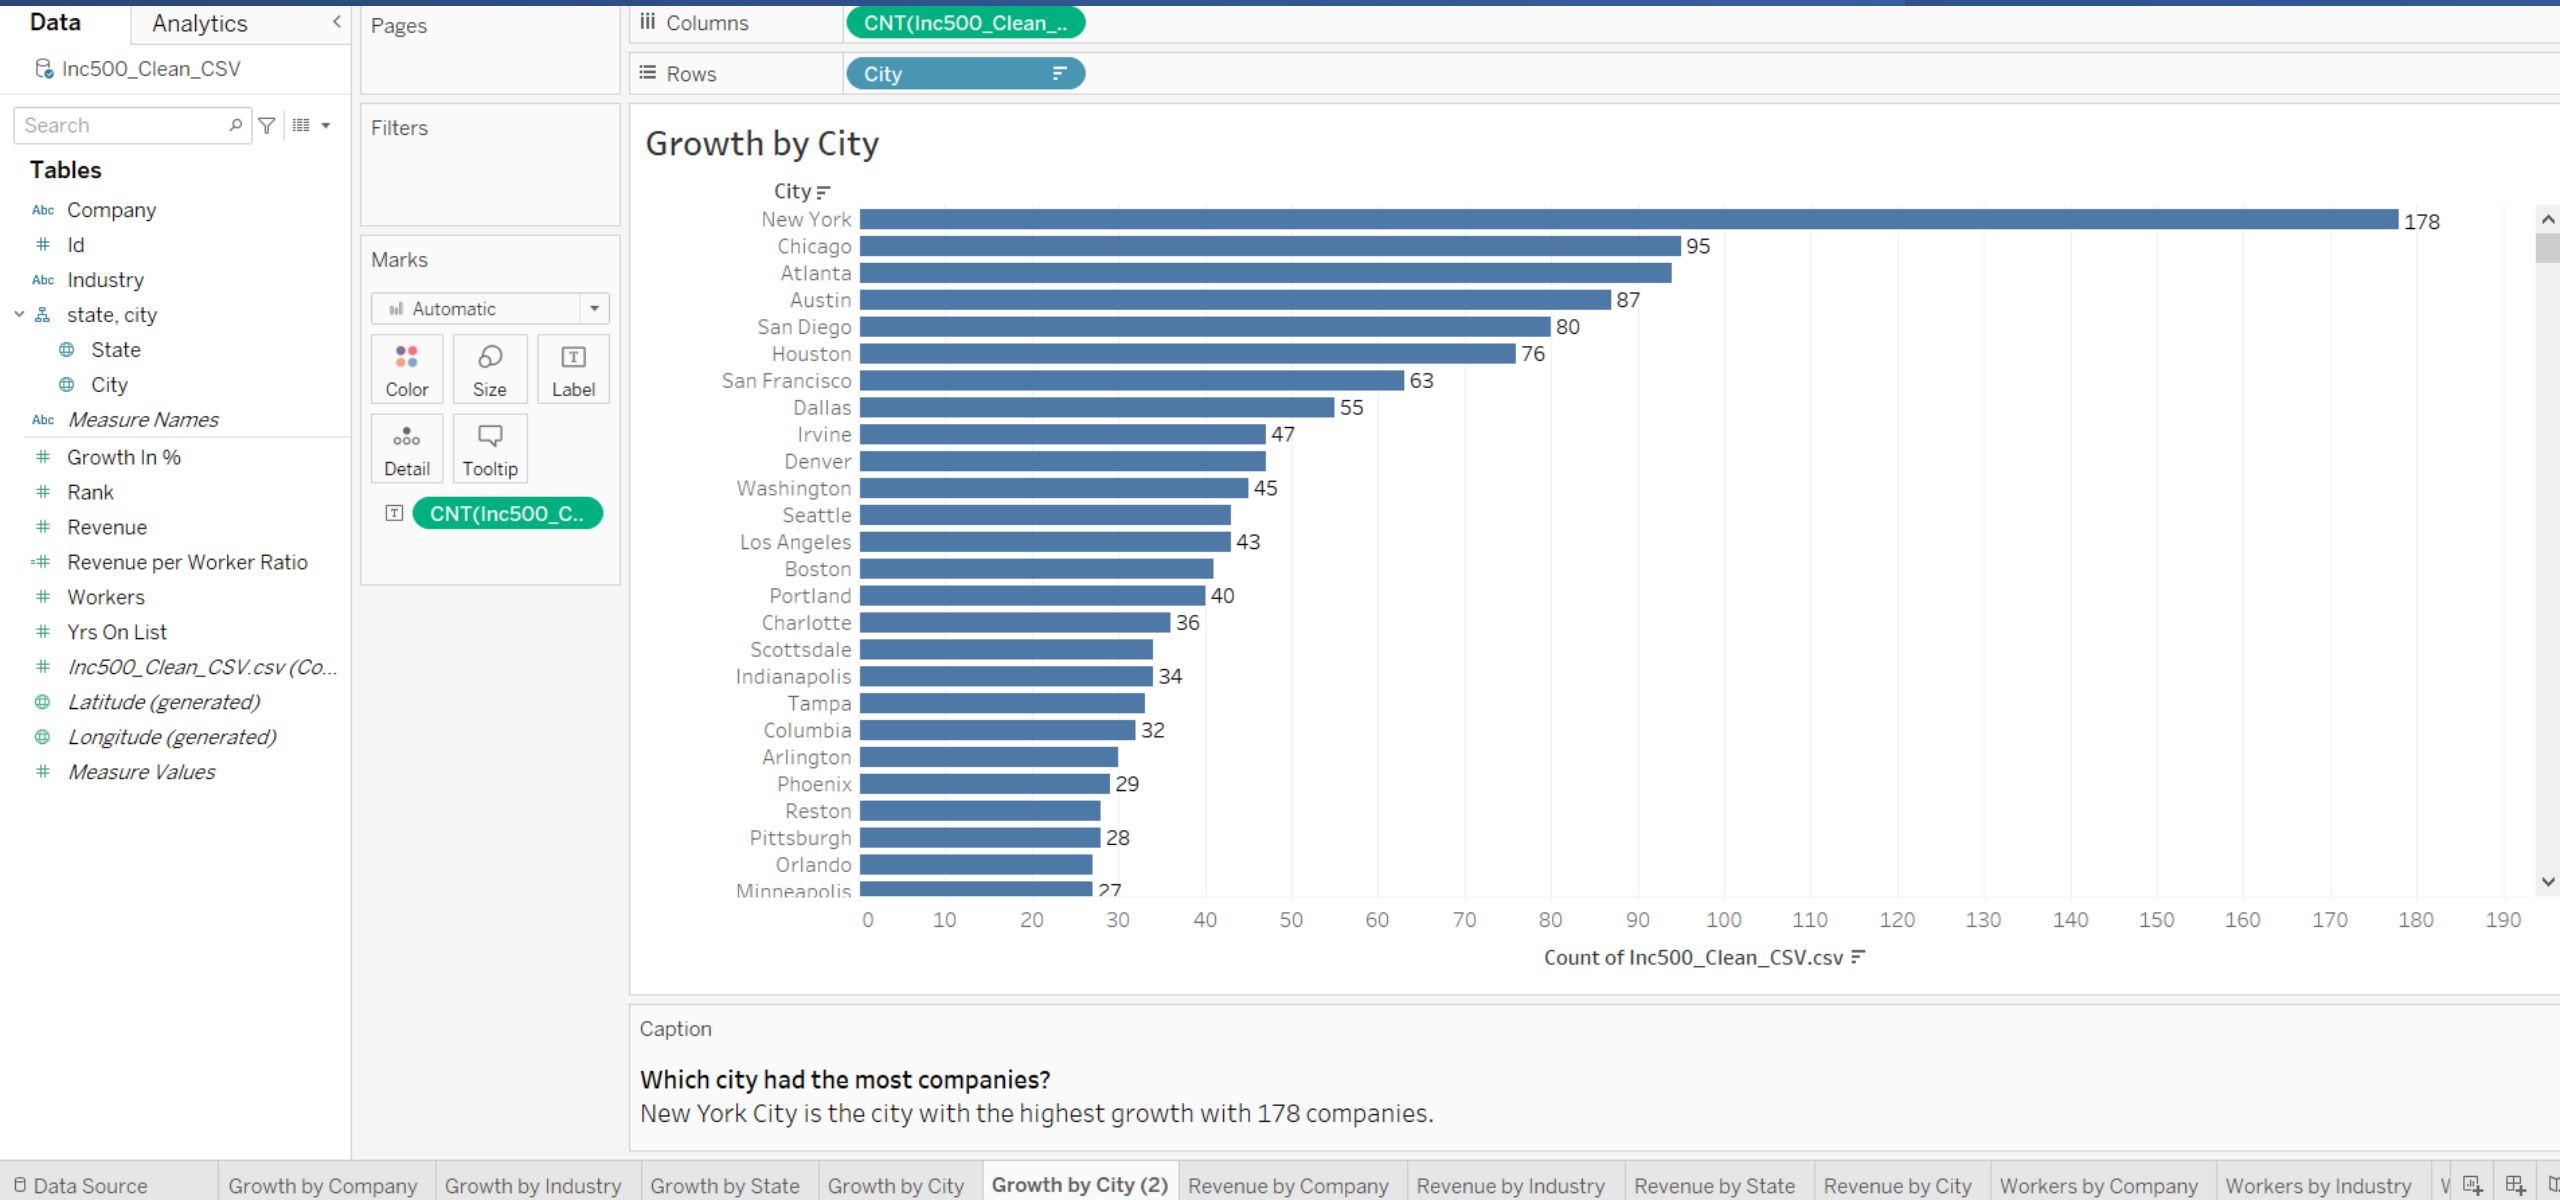

TABLEAU “GROWTH BY CITY (2)” HORIZONTAL BAR CHART

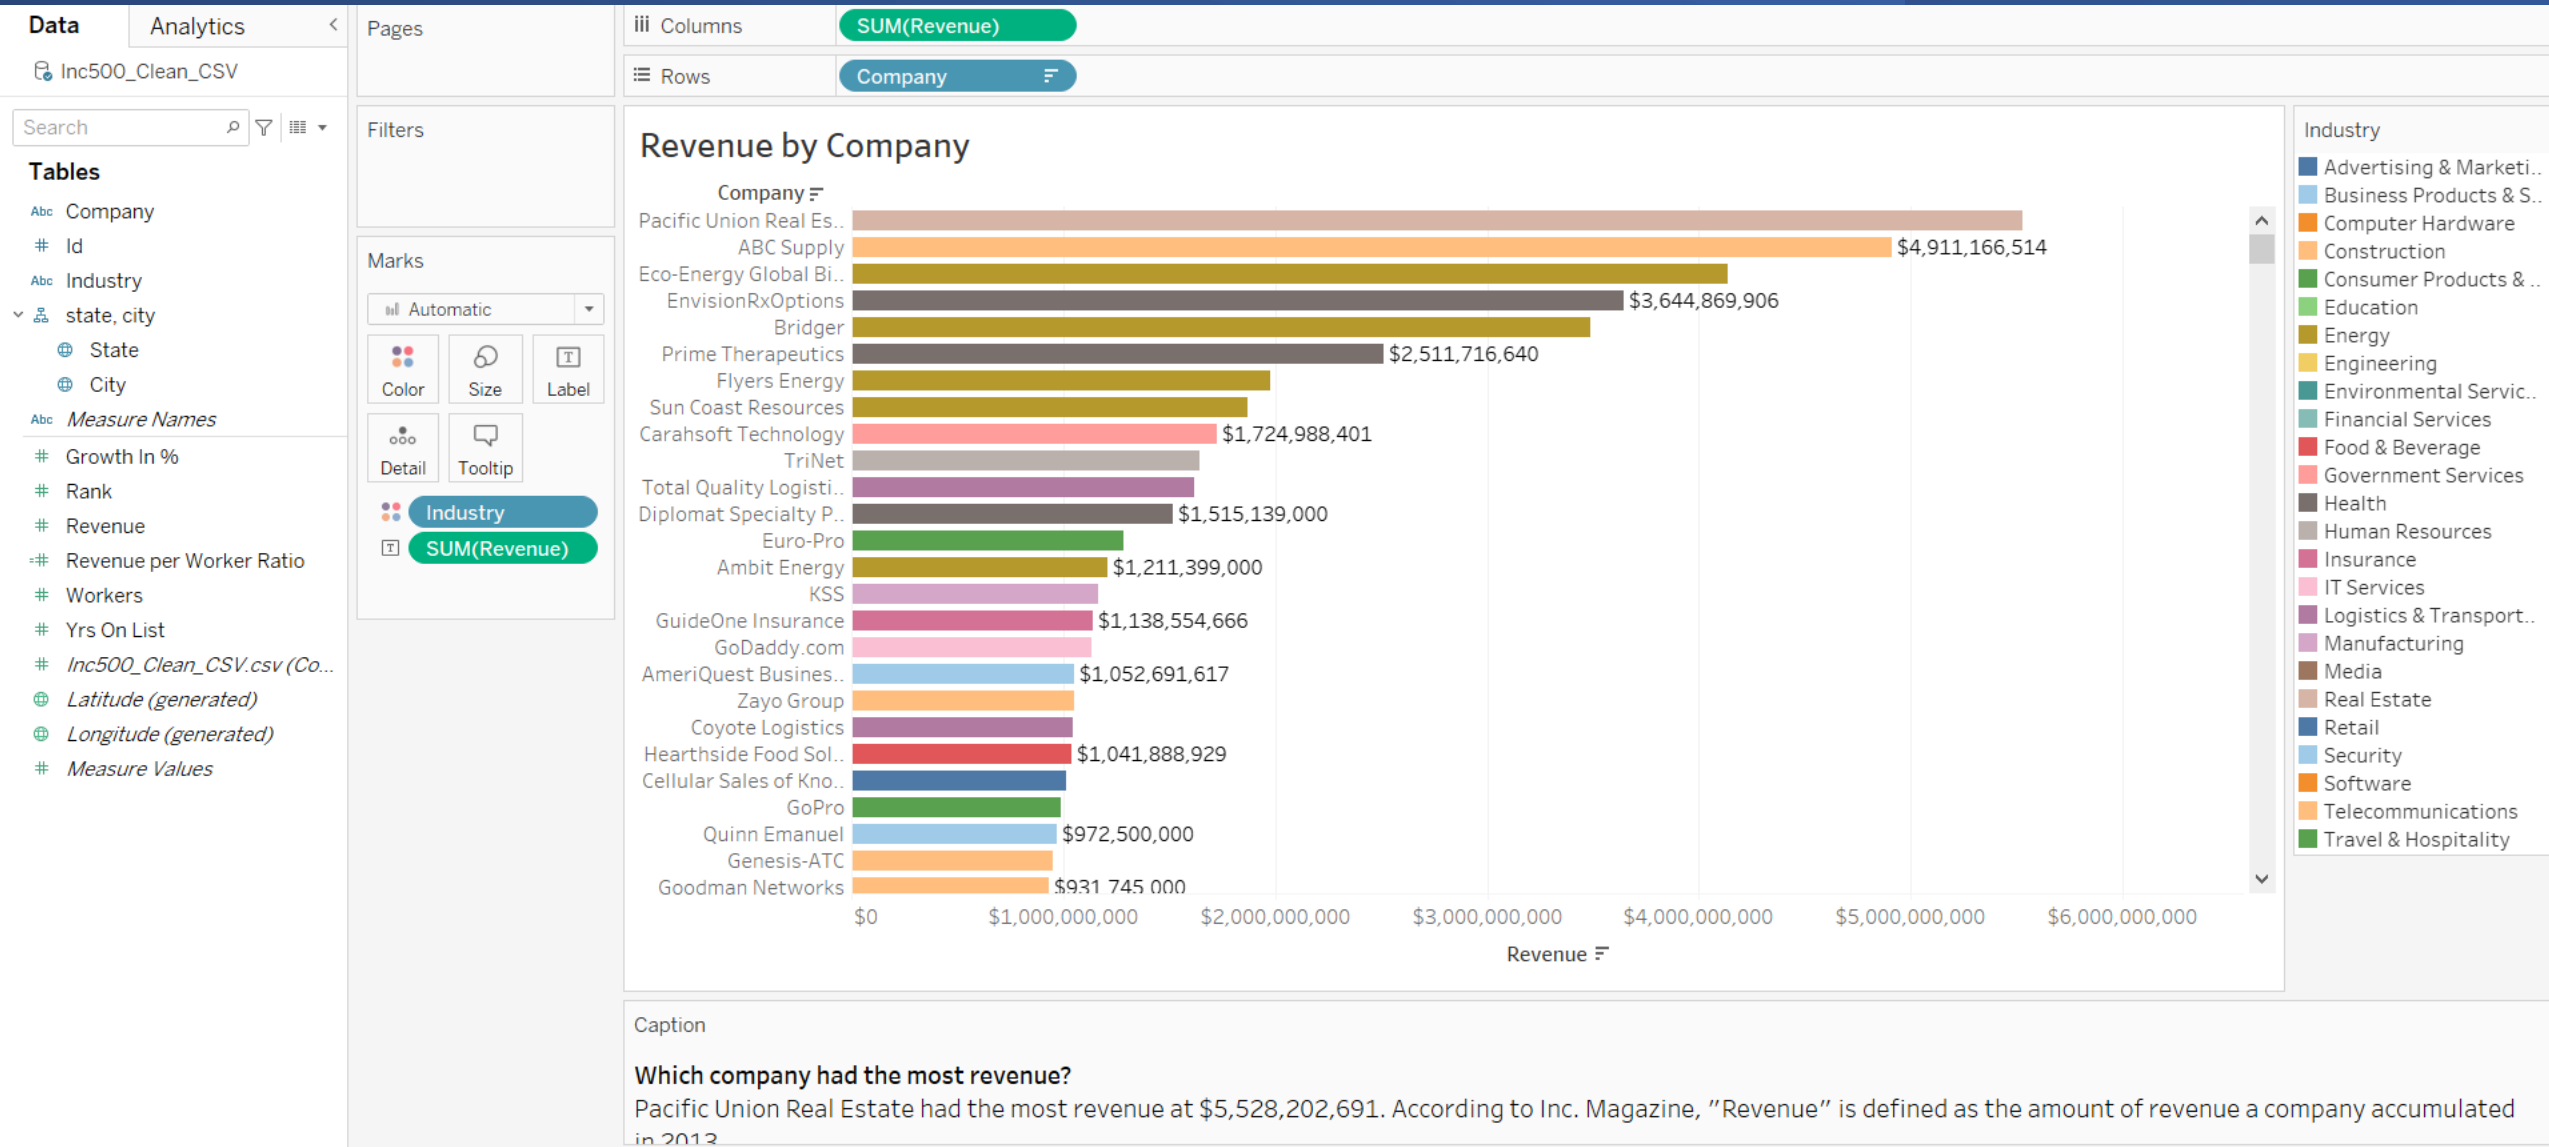

ANALYSIS AND FINDINGS (GROWTH)

- Fuhu, a computer and electronics manufacturing company, had the most growth in 2014 at a growth rate of 158,857%.
- Consumer Products and Services was the industry with the highest growth percentage on average 1,332%.
- California was the state with the most companies at 694.
- Most cities have a relatively low amount of companies with the exception of a few big cities that host a lot more by comparison.
- New York City was the city with the most companies at 178.

TABLEAU “REVENUE BY COMPANY” HORIZONTAL BAR CHART

Caption

Which company had the most revenue?

Pacific Union Real Estate had the most revenue at \$5,528,202,691. According to Inc. Magazine, "Revenue" is defined as the amount of revenue a company accumulated in 2012.

TABLEAU “REVENUE BY INDUSTRY” HORIZONTAL BAR CHART COMPARISON

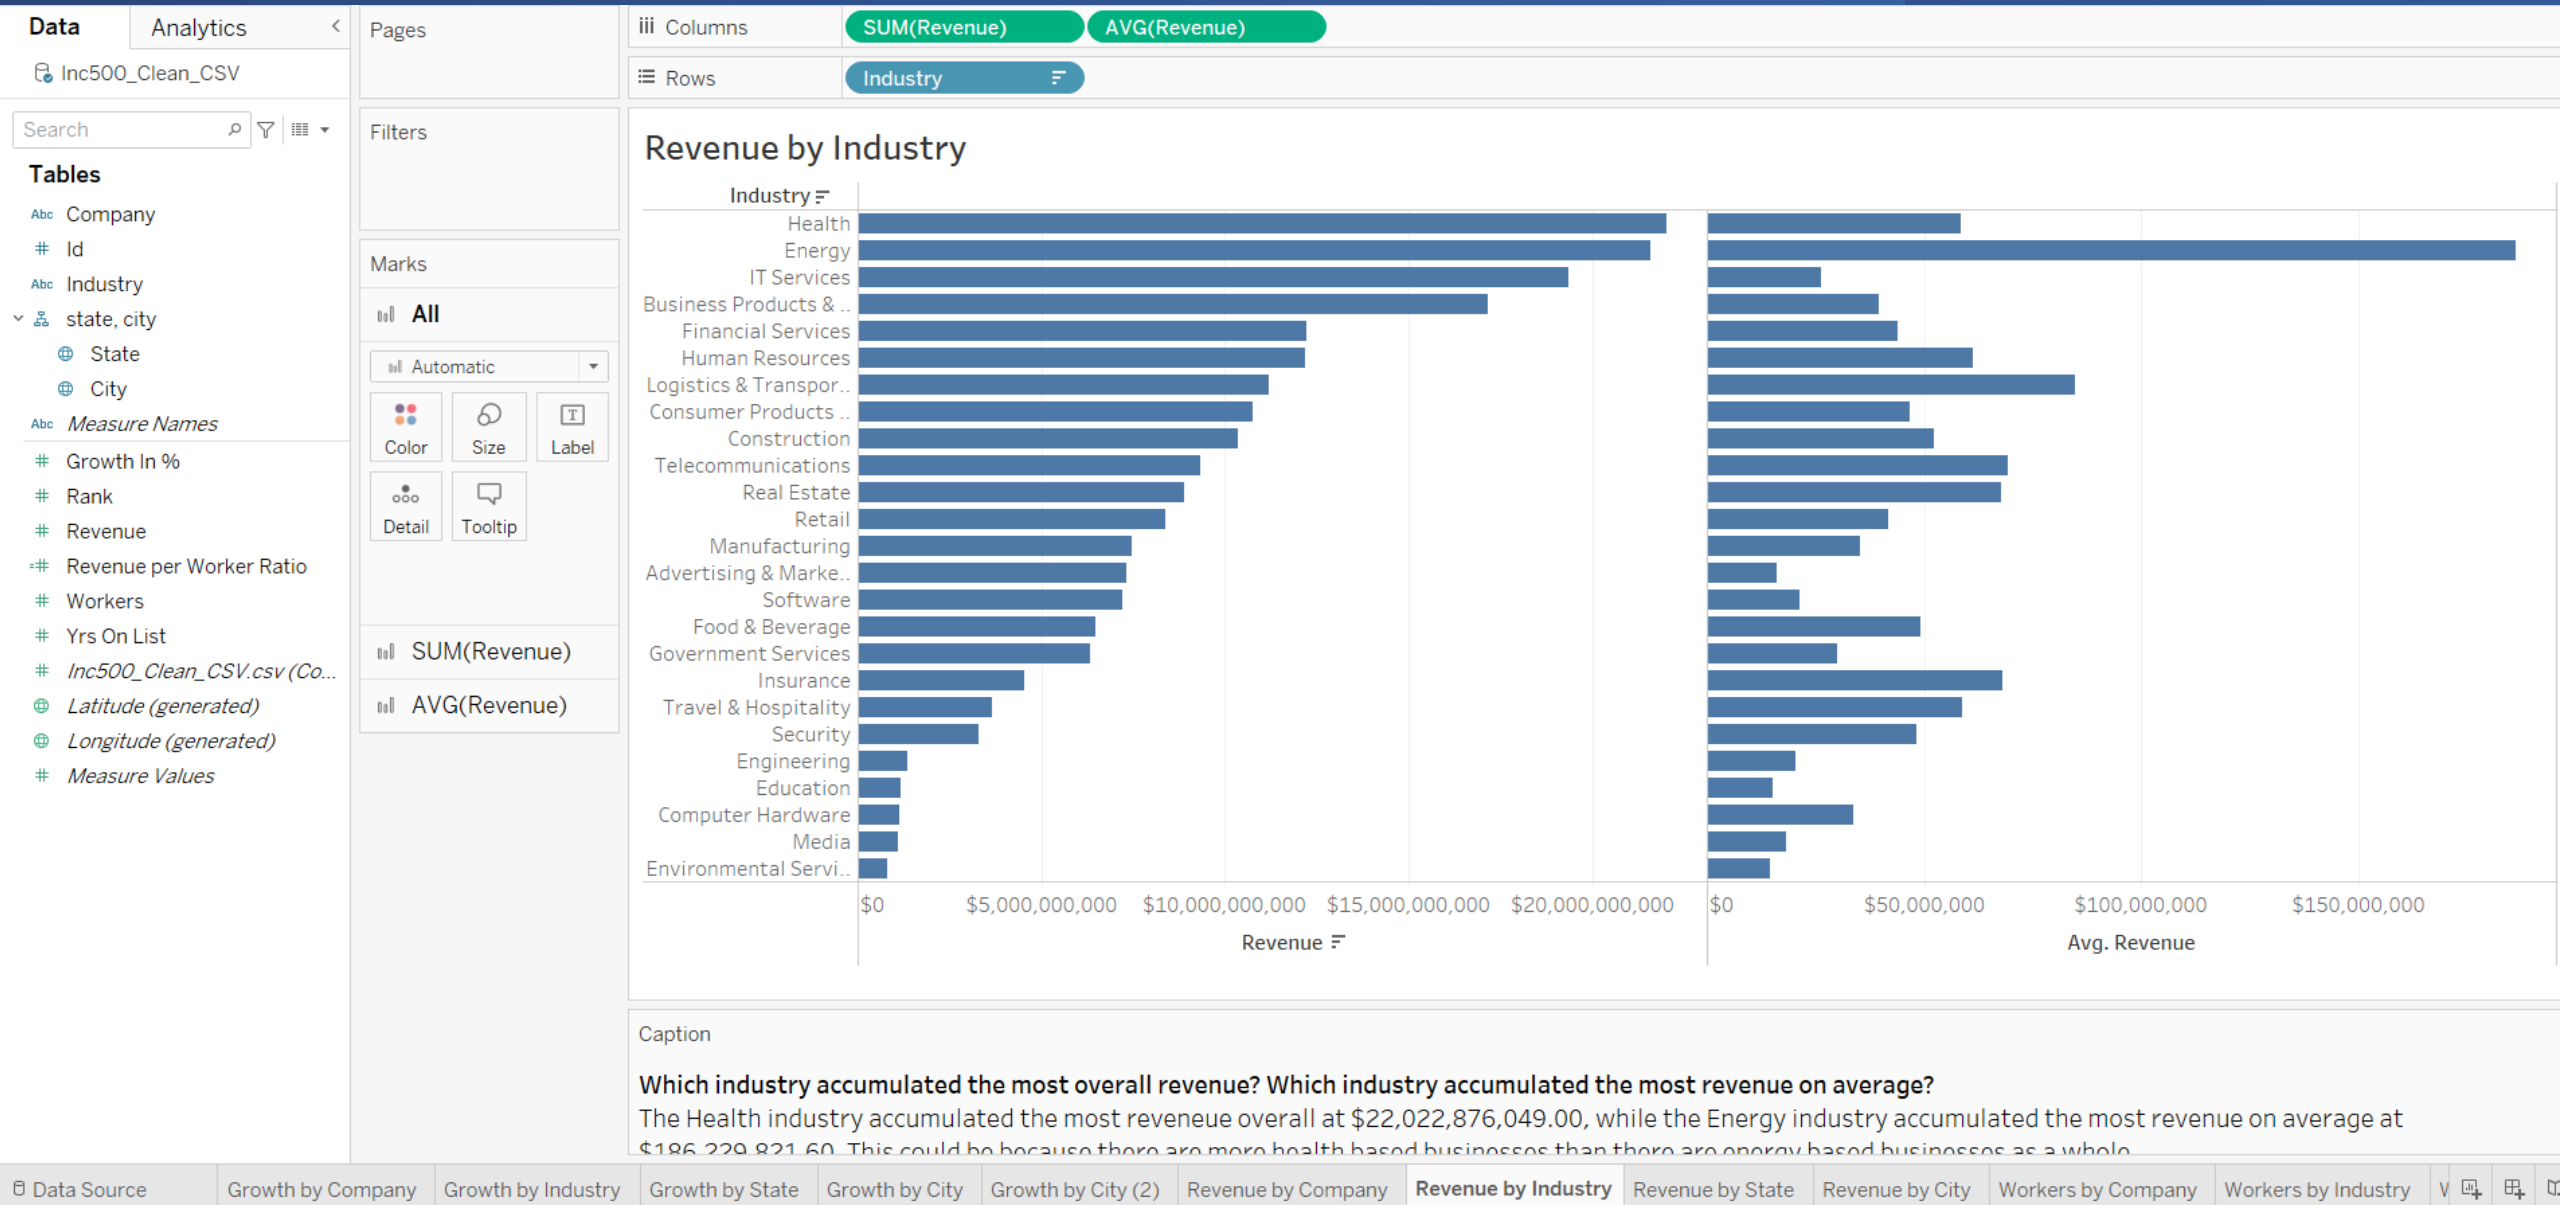

TABLEAU “REVENUE BY STATE” FILLED MAP

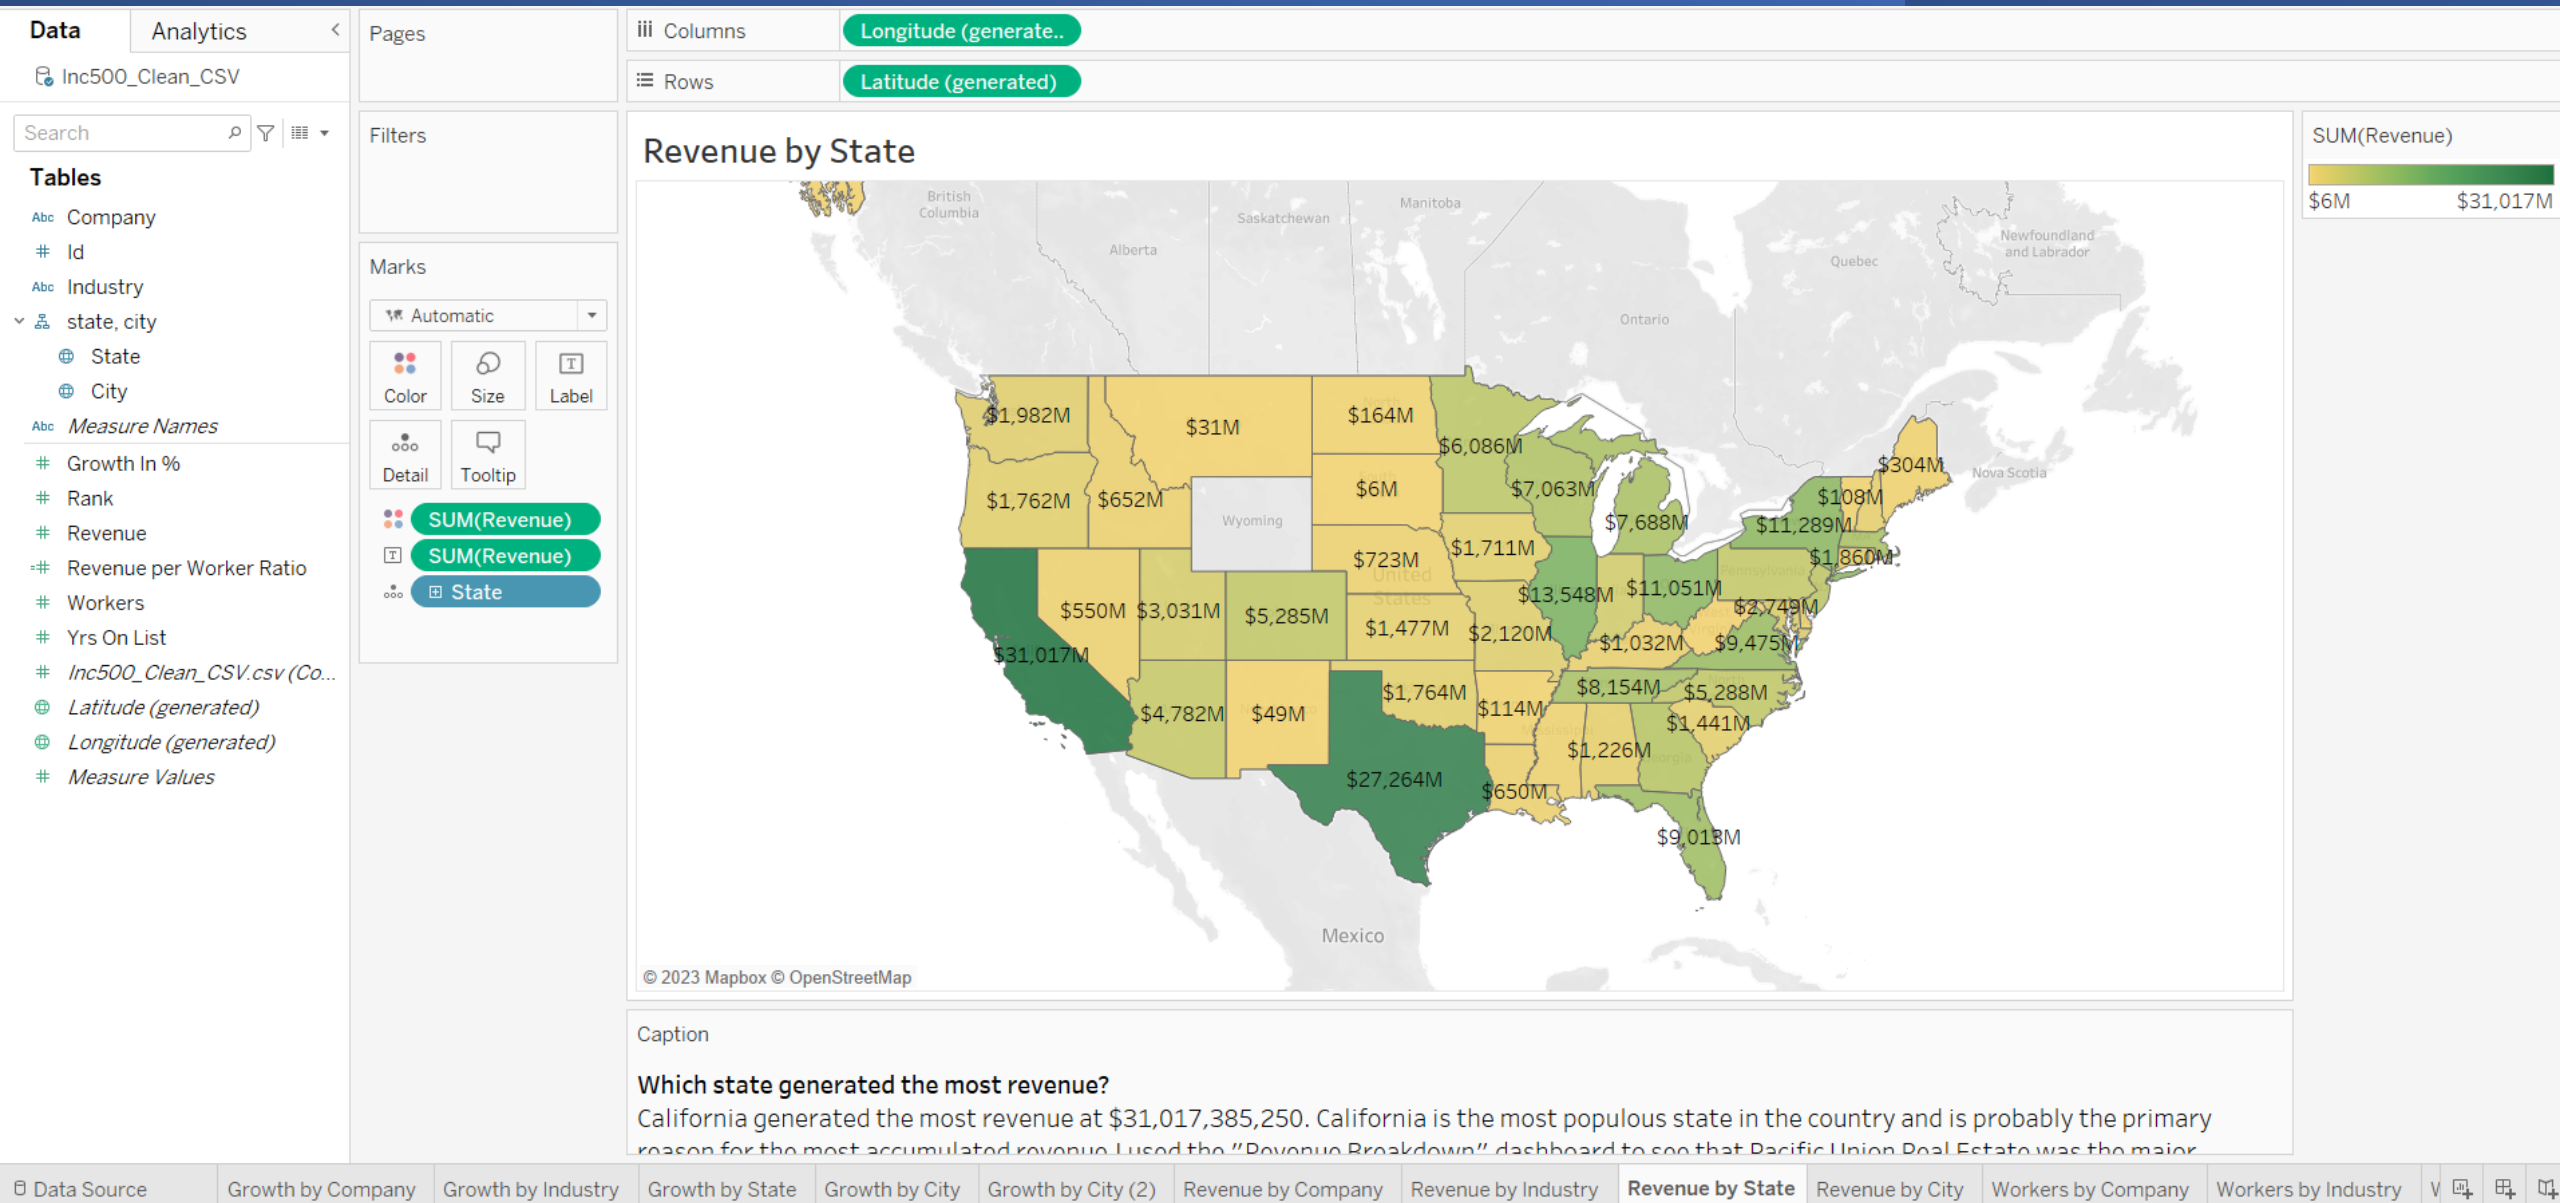

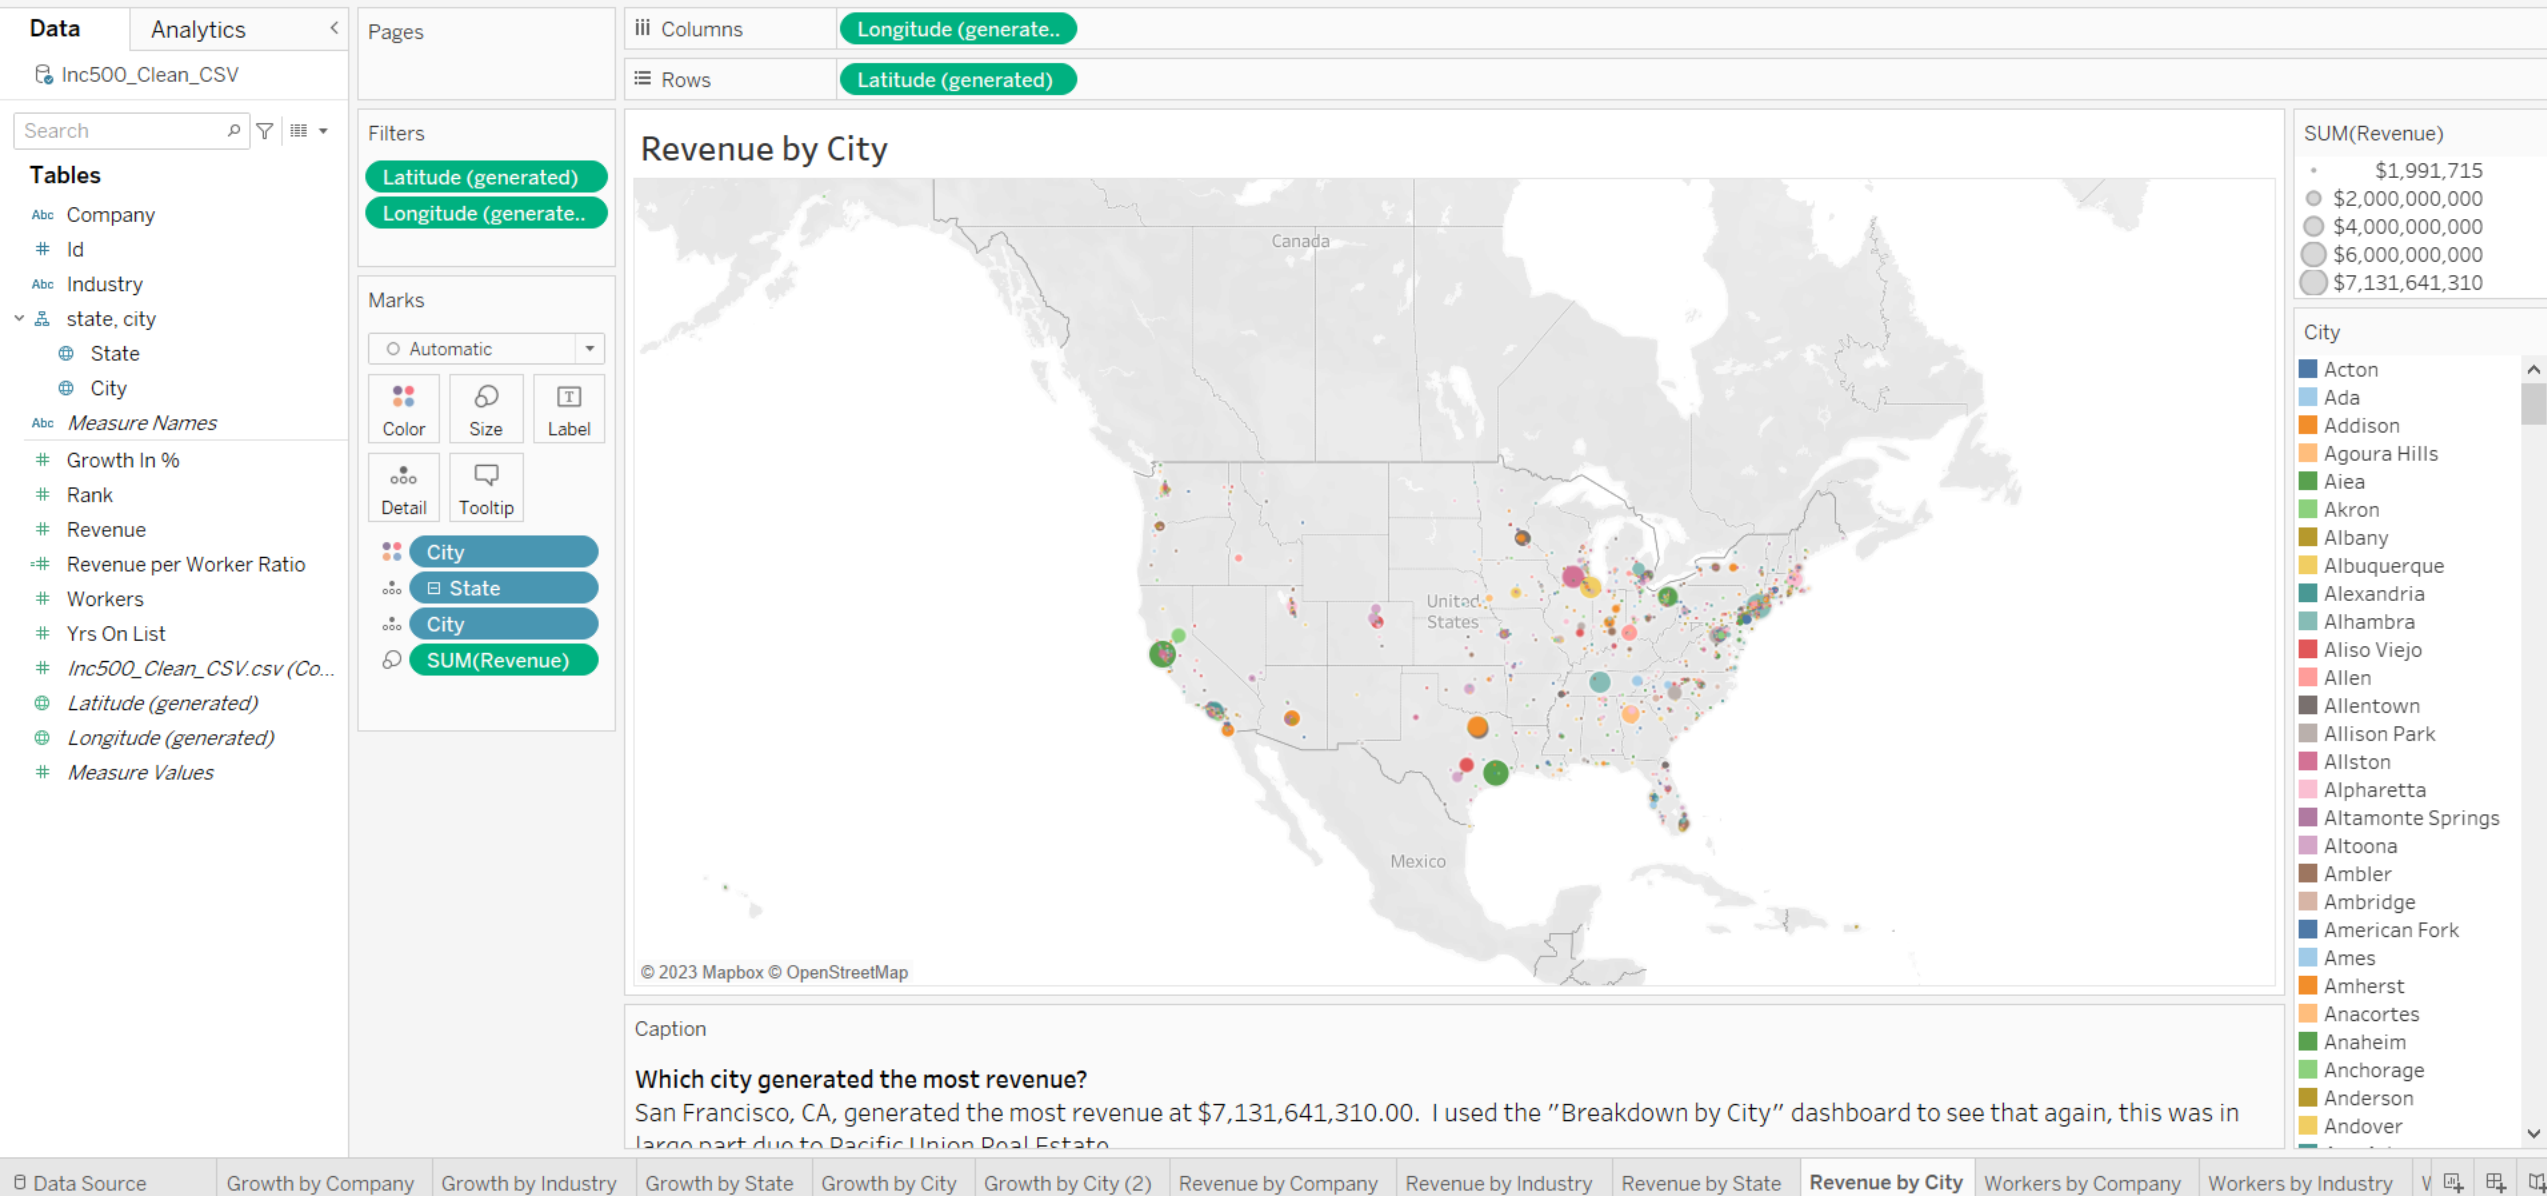

TABLEAU “REVENUE BY CITY” SYMBOL MAP

ANALYSIS AND FINDINGS (REVENUE)

- Pacific Union Real Estate was the company that accumulated the most revenue as of 2014 at \$5,528,202,691.
- Health was the industry to accumulate the most revenue as of 2014 at \$22,022,876,049, while the Energy industry accumulated the most revenue on average at \$186,229,821.
- California was the state that generated the most revenue at \$31,017,385,250.
- San Francisco, CA, was the city that generated the most revenue at \$7,131,641,310, nearly a quarter of the entire state of California's accumulated revenue.

TABLEAU “WORKERS BY COMPANY” HORIZONTAL BAR CHART

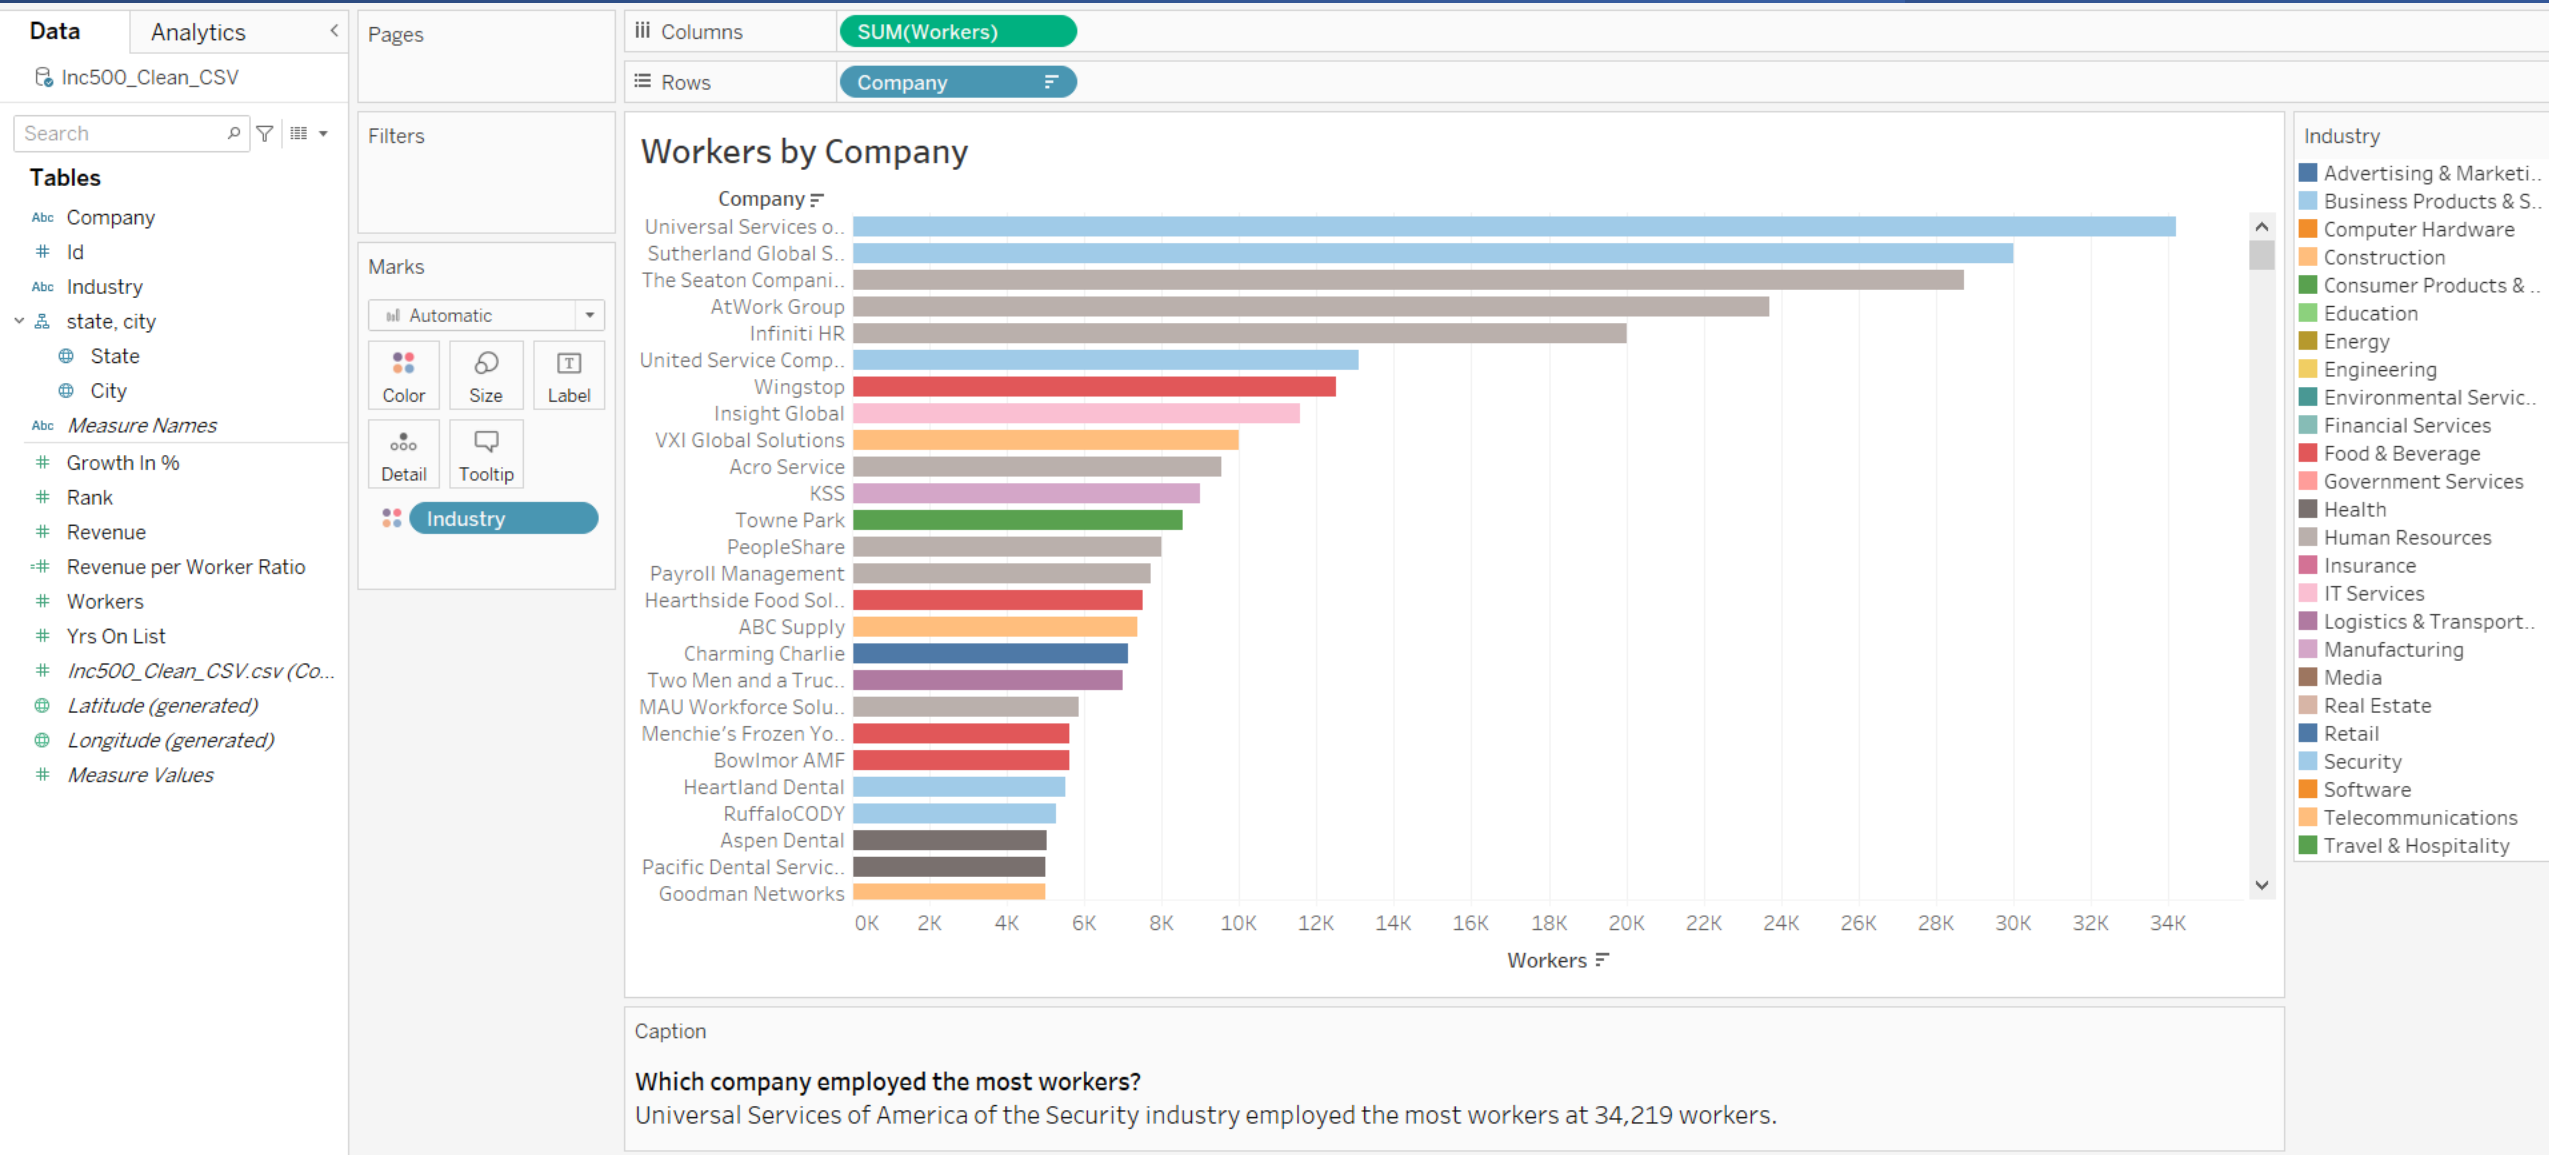

TABLEAU “WORKERS BY INDUSTRY” HORIZONTAL BAR CHART

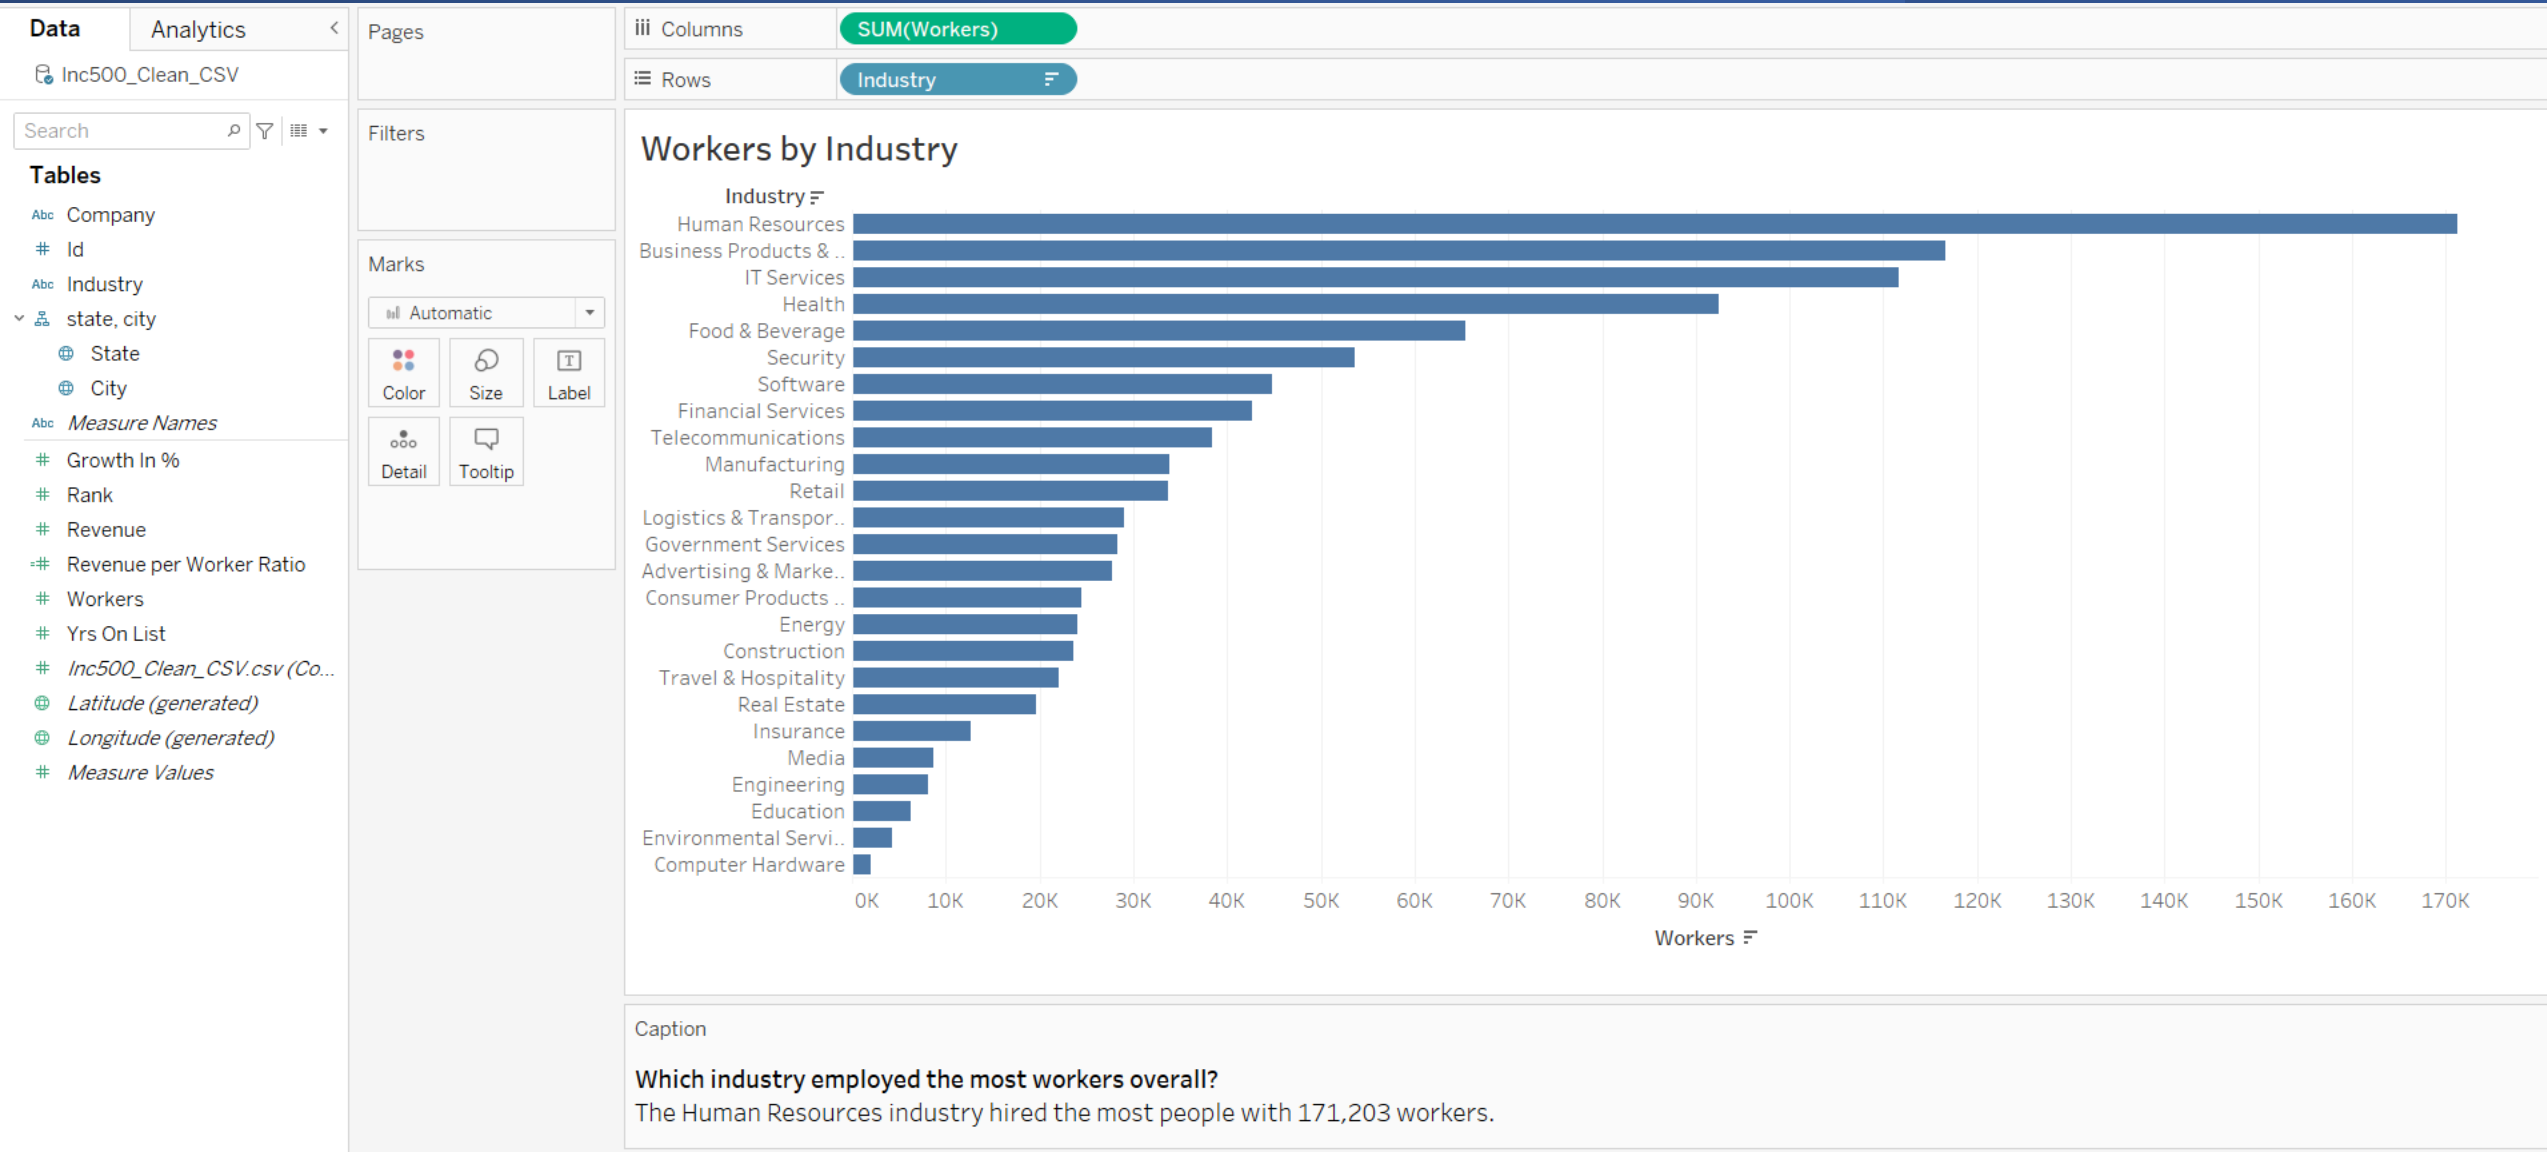

TABLEAU “WOKRKERS BY STATE” FILLED MAP

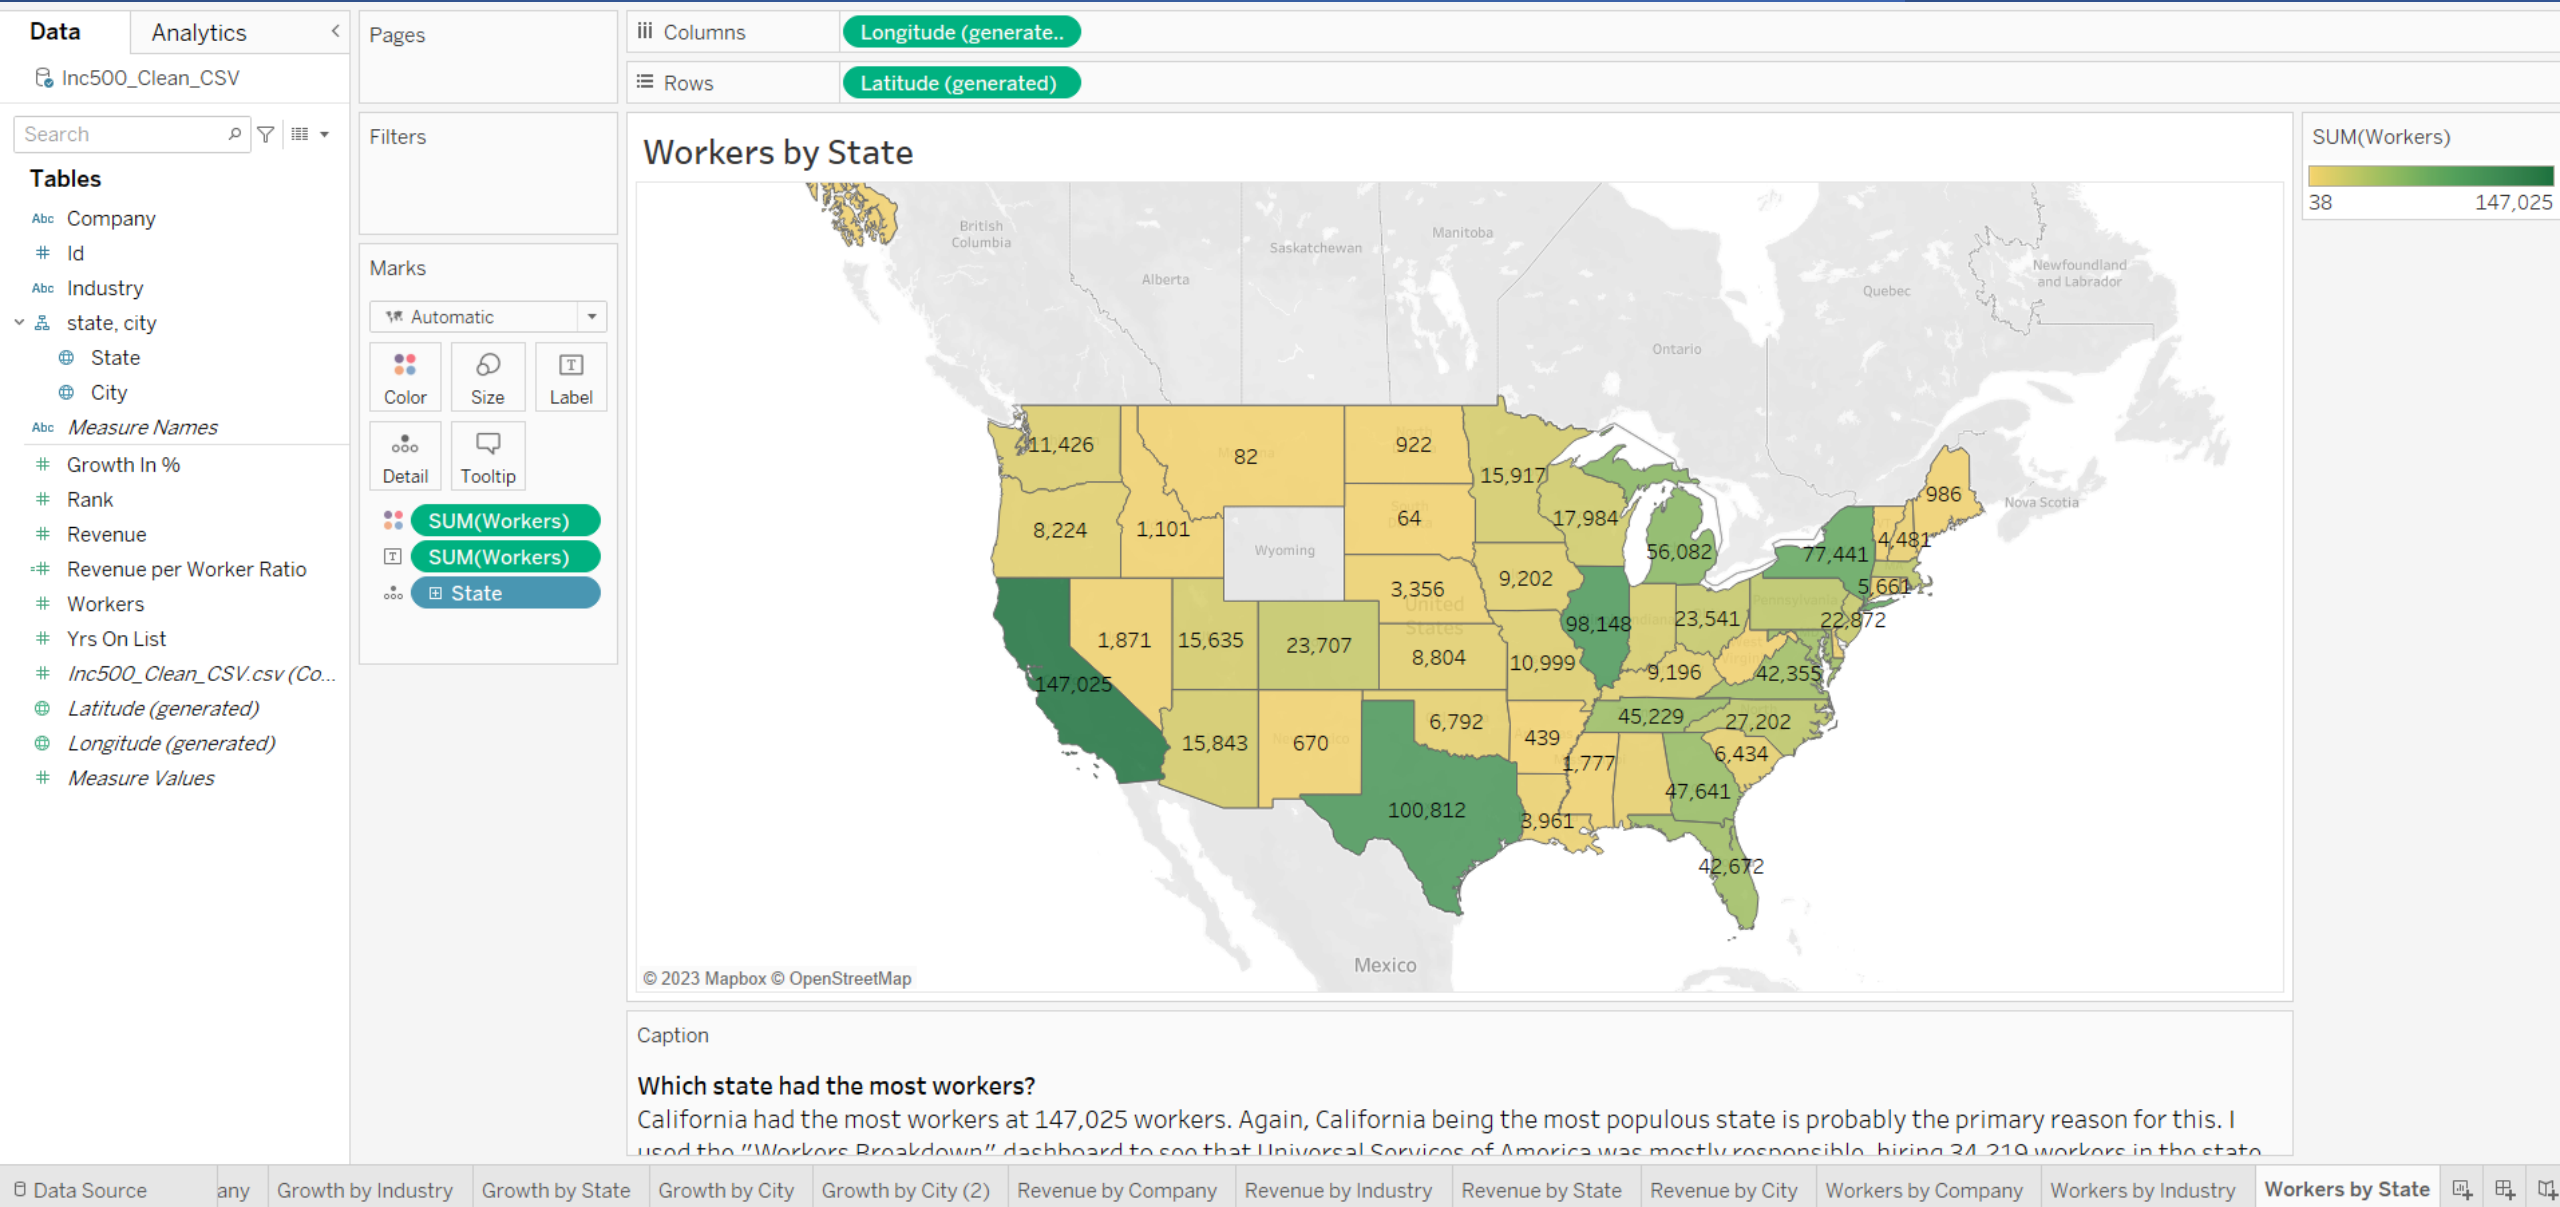

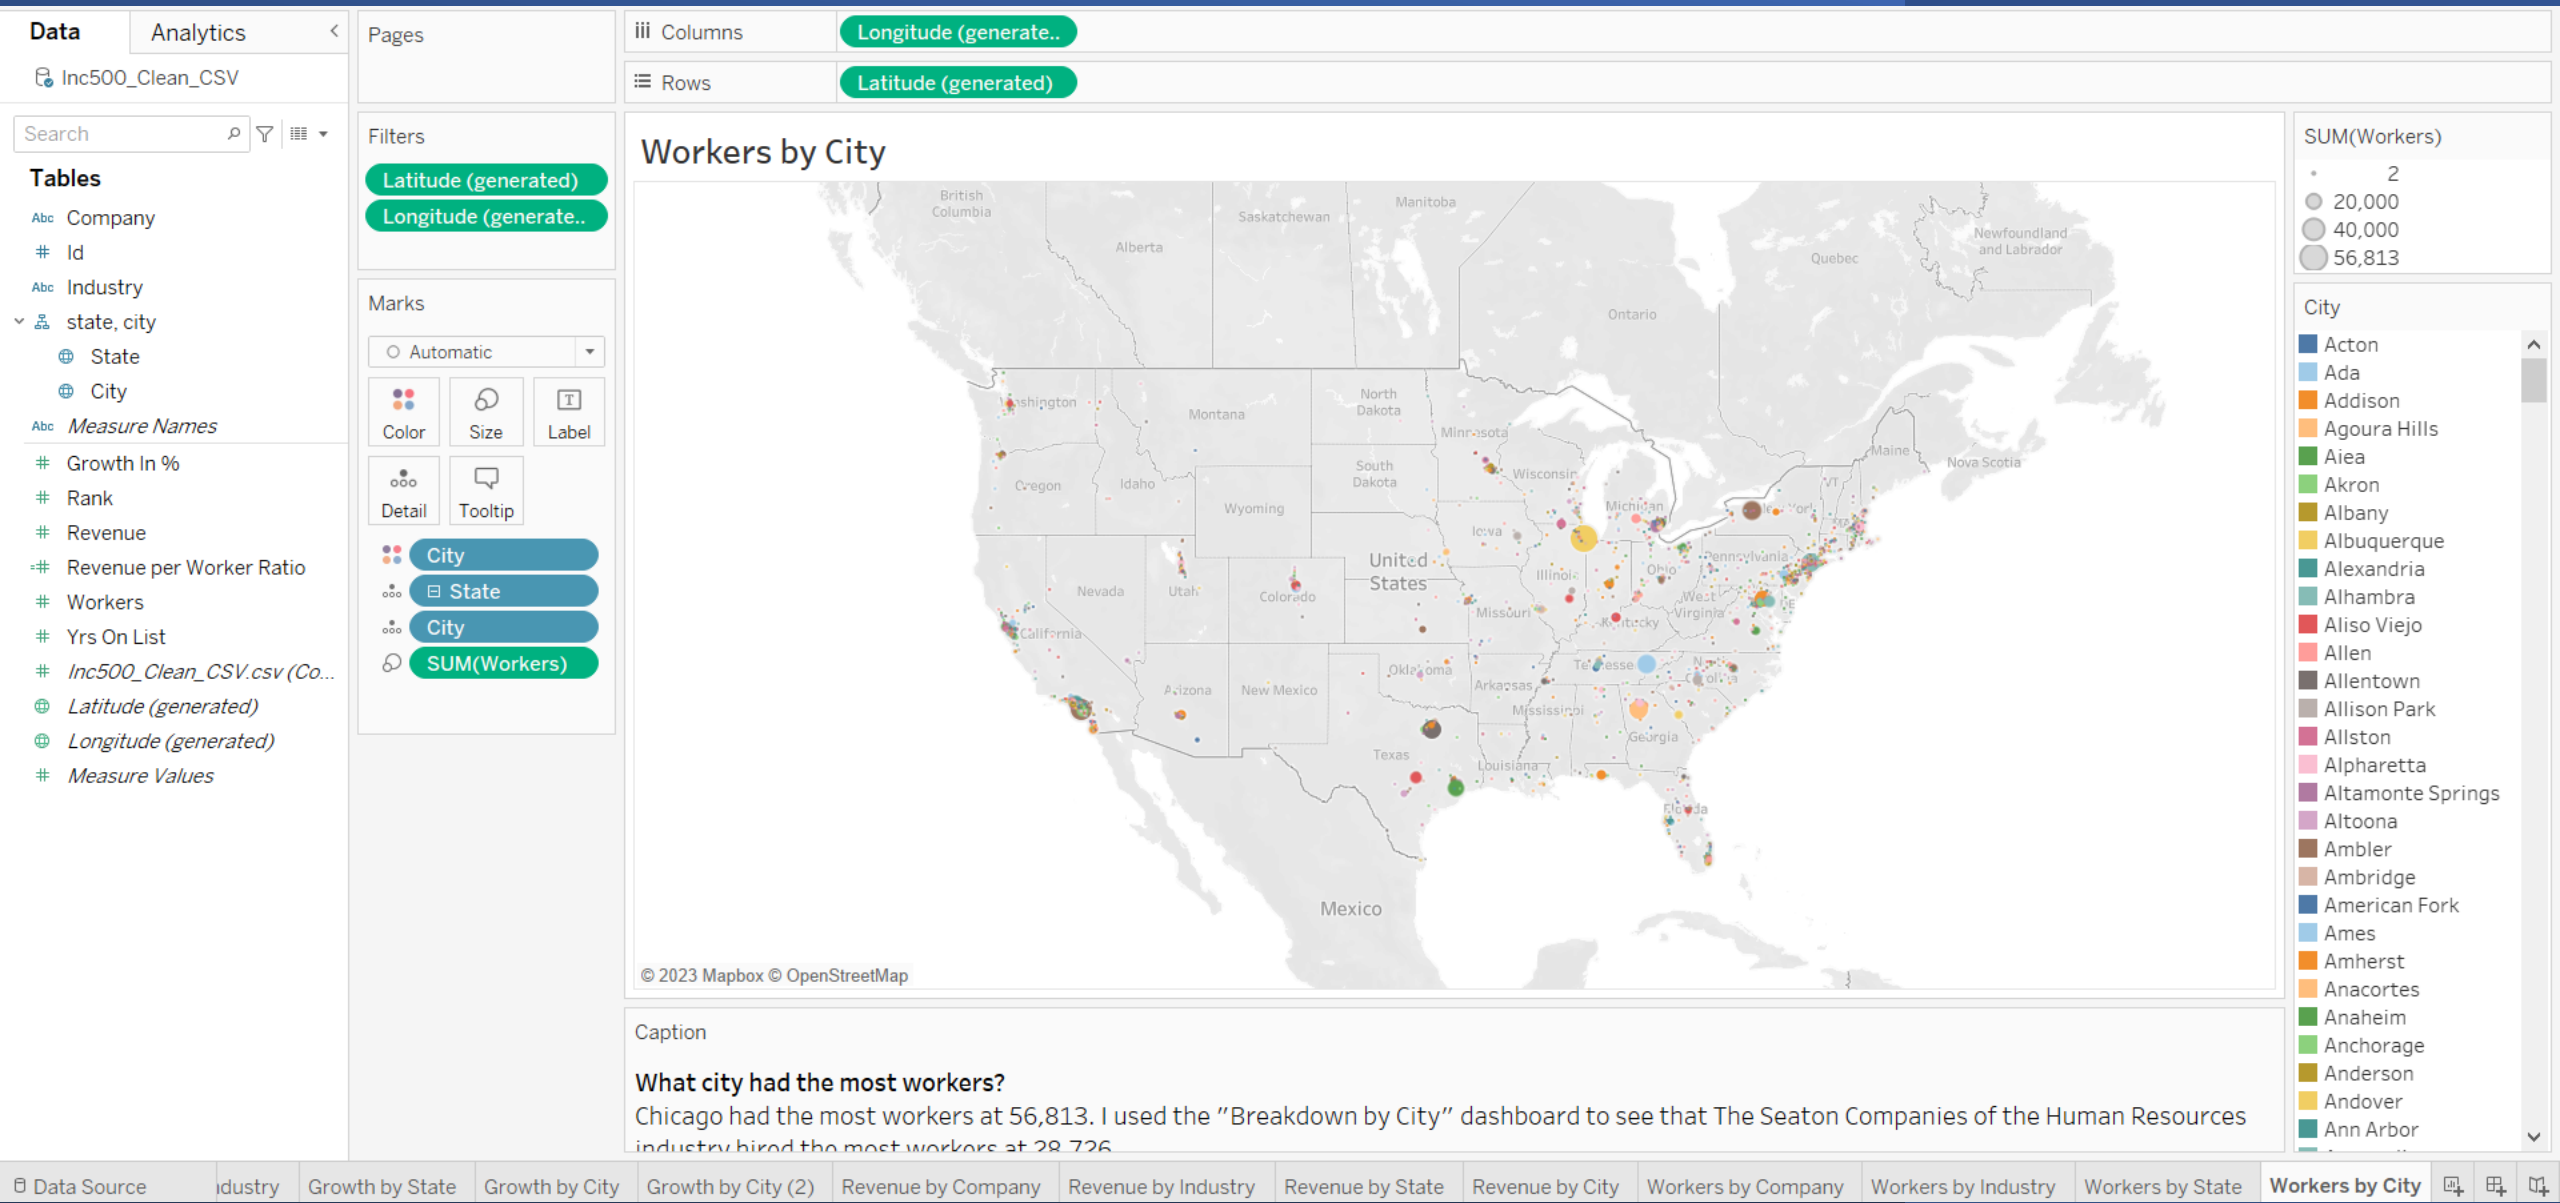

TABLEAU “WORKERS BY CITY” SYMBOL MAP

ANALYSIS AND FINDINGS (WORKERS)

- Universal Services of America, of the Security Industry, employed the most workers at 34,219 workers.
- The Human Resources industry hired the most people overall at 171,203 workers.
- California was the state that hired the most people at 147,025 workers.
- Chicago, IL was the city that hired the most people at 56,813 workers.

TABLEAU “REVENUE-WORKERS CORRELATION” SCATTERPLOT

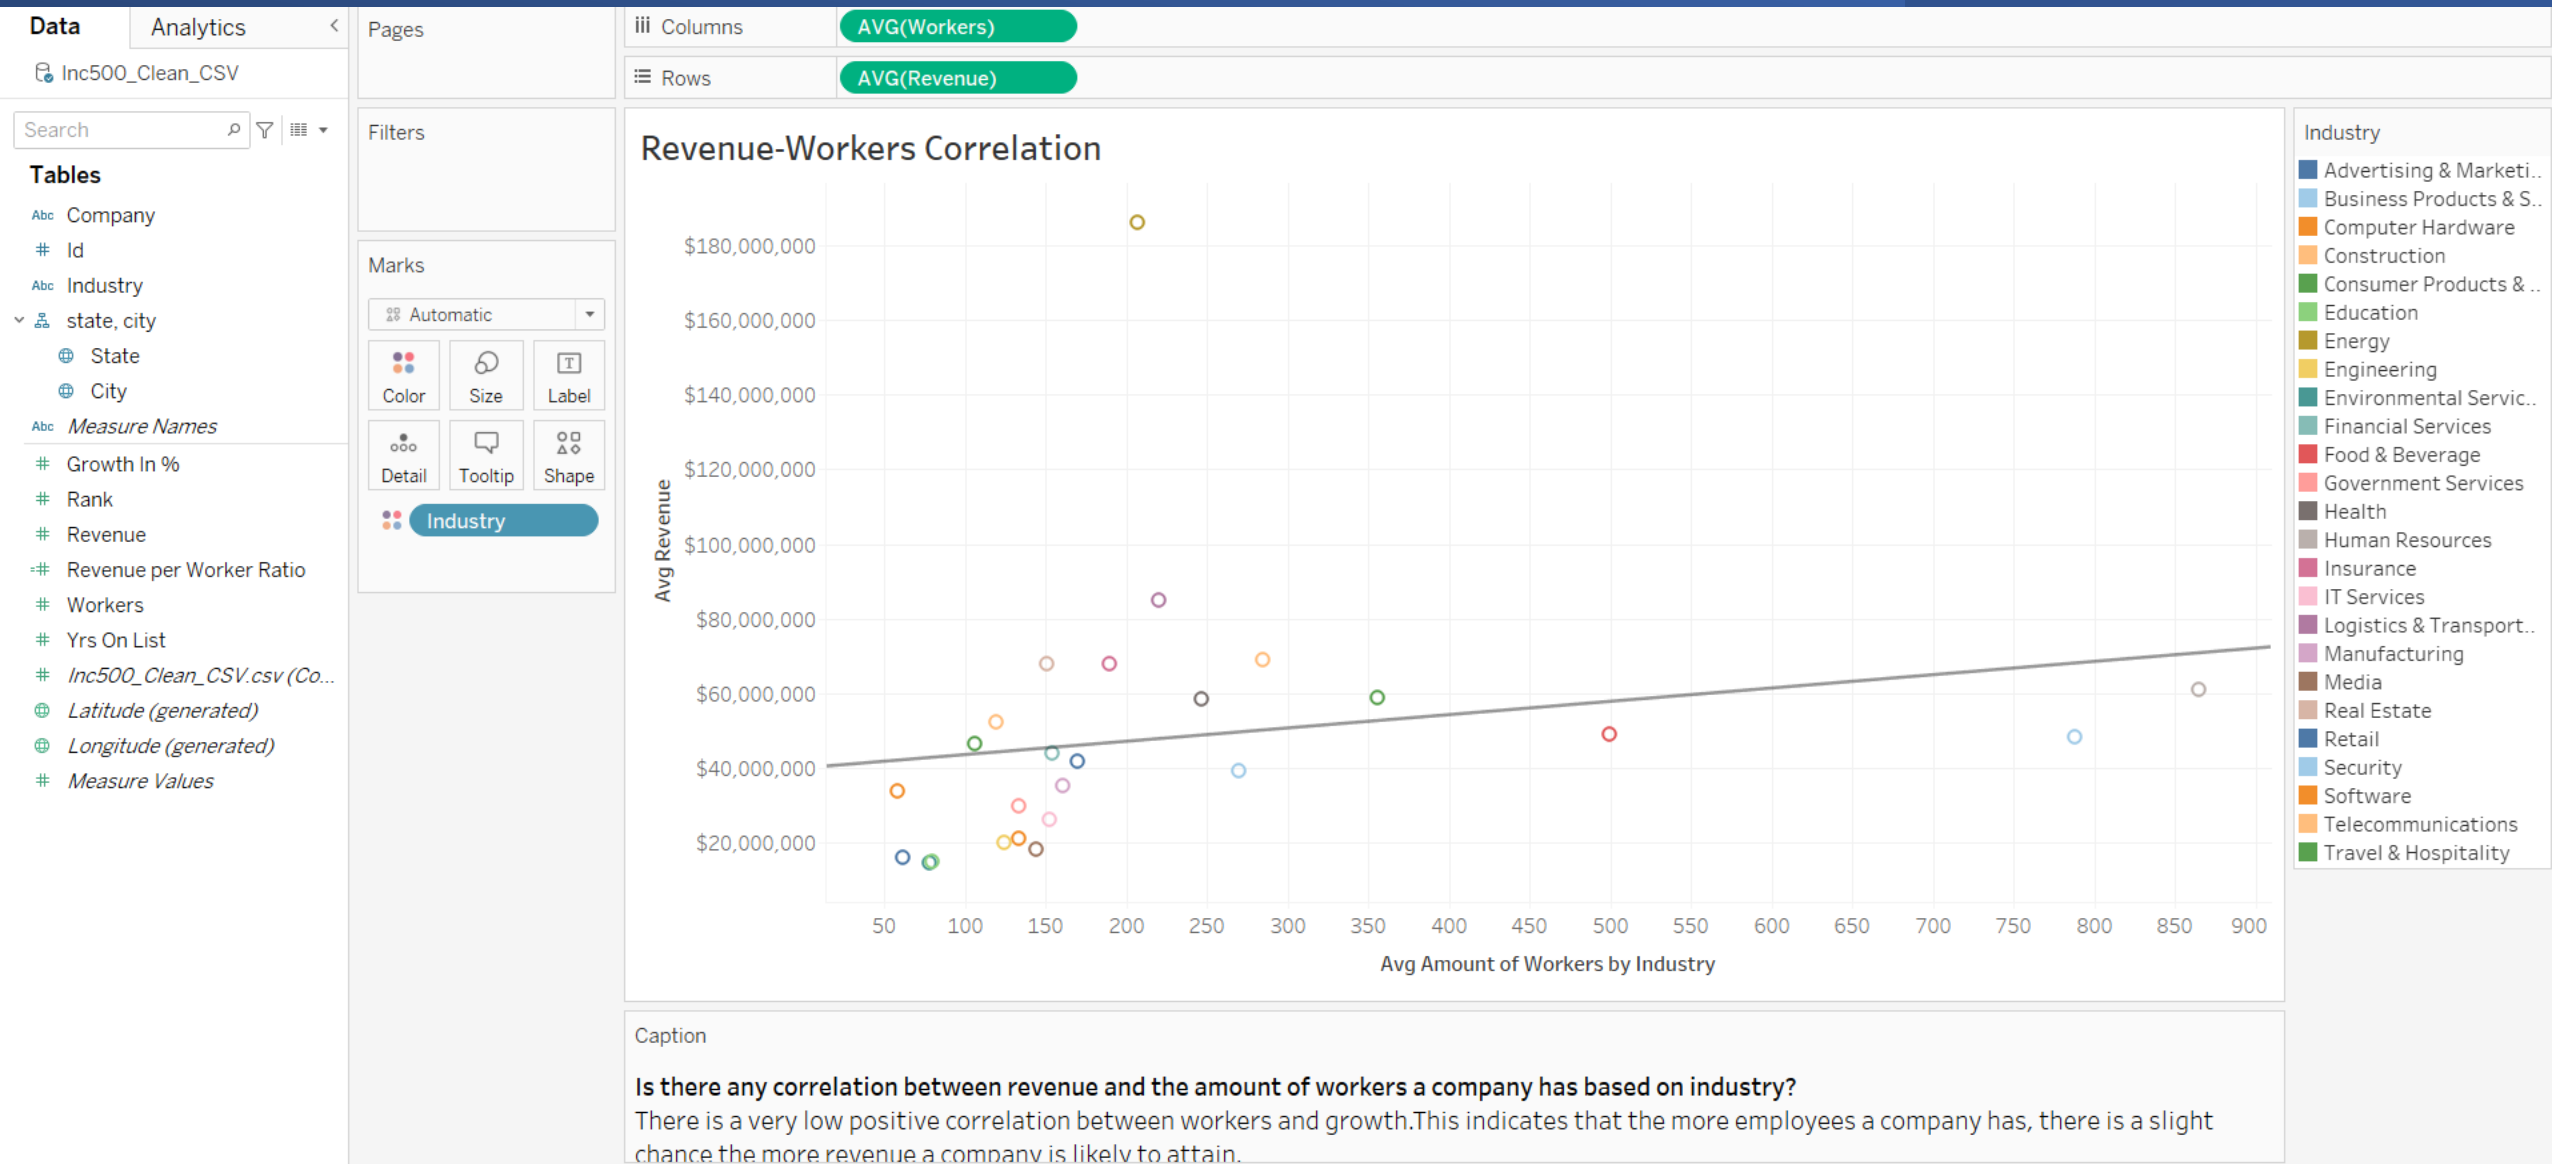

TABLEAU “REVENUE-GROWTH CORRELATION” SCATTERPLOT

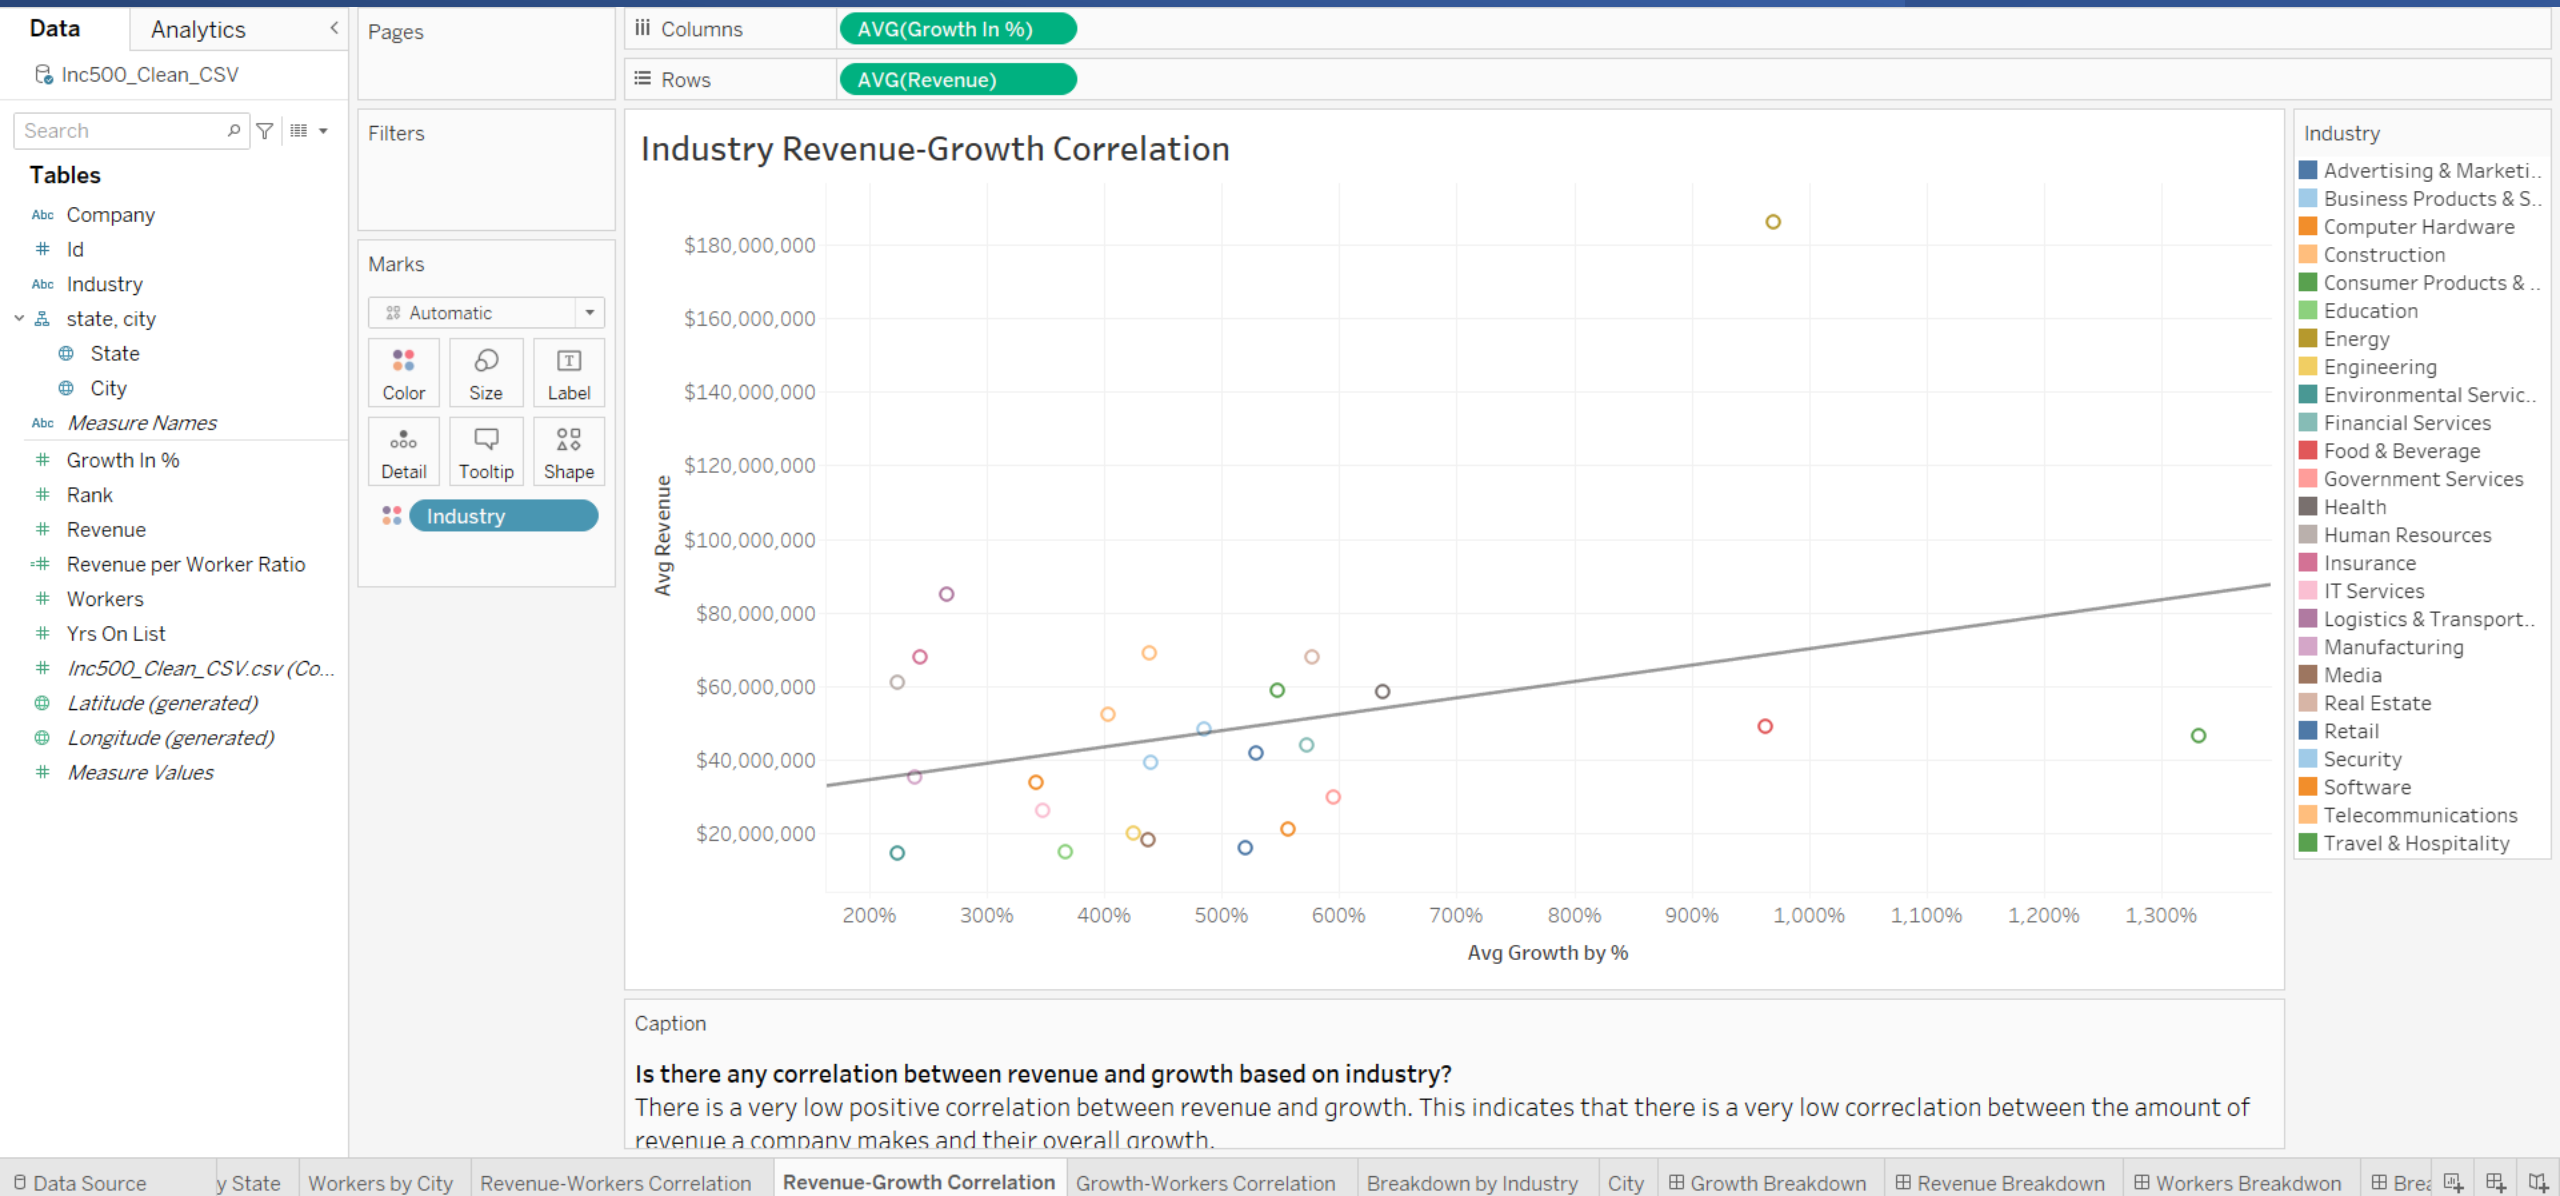

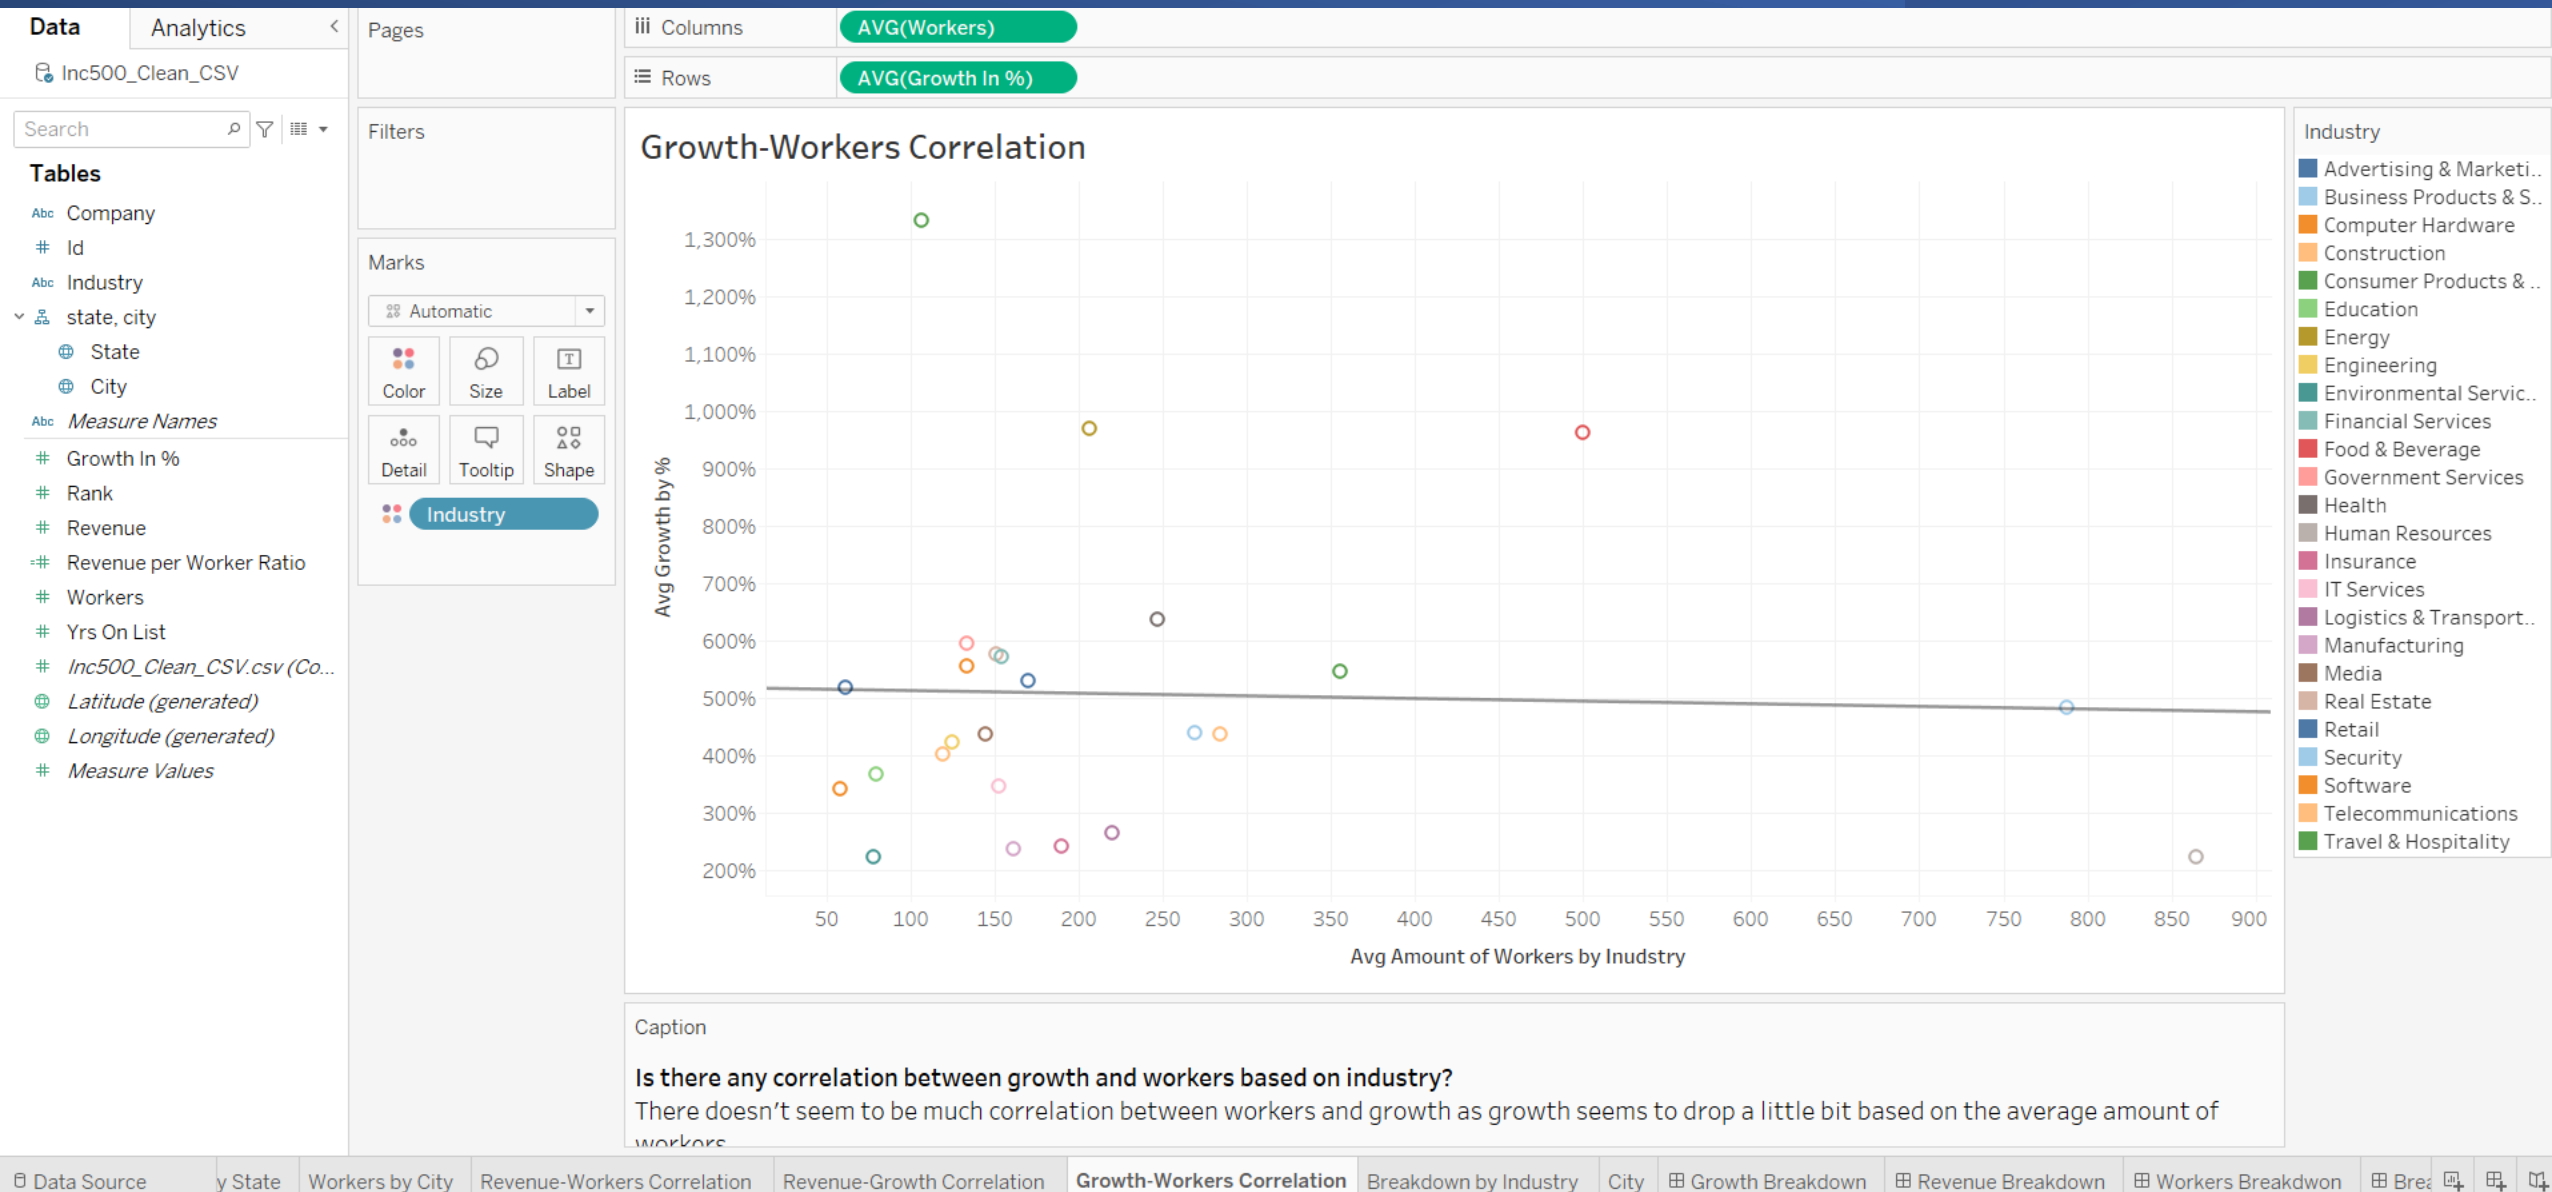

TABLEAU “GROWTH-WORKERS CORRELATION” SCATTERPLOT

ANALYSIS AND FINDINGS (CORRELATIONS)

- Although there were some outliers, I did see some very low positive correlations between the following based on Industry:
 - The amount of revenue accumulated and the total amount of workers that were employed.
 - The amount of revenue accumulated on average and the average amount of growth.
- There was little to no correlation between workers and growth.

CONCLUSION

- Even though I felt like some of these findings were a bit obvious, like California generating the most revenue, for example (as it is the most populous state in the country), I was pleasantly surprised by other findings.
- Interesting Findings:
 - San Francisco, CA, was the city that generated the most revenue.
 - Human Resources was the industry that hired the most people.
 - Chicago, IL was the city that hired the most people.
 - Wyoming didn't have any of the fastest-growing, privately-owned companies out of the Inc.5000!
 - There weren't any significant correlations between revenue and workers, revenue and growth, or workers and growth.

FURTHER ANALYSIS

- **Areas to Improve:**
 - I would like to have access to all of the years that Inc. Magazine has put out this list so that I can analyze the data over time to develop new insights.
 - I would also like to have access to each companies' yearly revenue in terms of relevance to the growth percentage period so I can gain more accurate insights from one year to the next for each company's revenue.
- **Possible Solution:** Contact Inc.com and request all of the Inc.5000 datasets. Also request that they provide the year-to-year revenue for each company.
- **Future Research:** What are the top 5000 fastest-growing public companies?
